

Important:

We do not distinguish between the different booking systems (GDS / LCC).

When thinking of cancellations it's the kind of cancellation that's important - fare rules, taxes, void, 24h rule, FM, SC, etc.

- Confirm the request (which passenger to be canceled)
- Open the PNR and check where it was issued and the ticket status
- If the ticket status is checked-in, first try to cancel the web check-in on the airline website. If it is not possible to cancel web check-in on the website then refer the customer to the airline to uncheck the booking and then ask them to get in touch with us again for the request.
- All segments? One way? Separate tickets?
- Have they used their Flexible Ticket? If yes; then no ref regardless of the ticket rule (only tax ref is possible)
- Cancellation Guarantee? Fees per person? Please note: no refund fee for infants
- Check **Fare Rules** -->

Please note that some airlines describe **Non-show** conditions connected to the Refund actions in the **Changes** part of the fare rules. Therefore, it is very important to check **both** the Cancel and Changes parts of the Rules (and identify if cancellation is permitted and if any fees apply).

- Check if the refund fee is higher than the cost of the ticket.
If yes then we don't refund the customer (Do not use modify order, use the cancel button instead)
- Inform that all taxes and fees might not be refunded
- Method of refund (Credit Card, invoice, or net-bank) and inform about refund handling time as per scripts [here](#)
- Name of the person who cancels
- Run the cancellation wizard "**modify order button**" in Edvin, so that a register errand has been created and the Change/Cancel status in Edvin has been updated
- Send Cancellation confirmation email from Edvin
- Review customer's email history and close all emails linked to the same order.
