Step 2

Solution Parent step: 1

Transfer an interaction

In case you need to transfer a chat interaction you can choose from the following list of available queues. If you transfer the interaction to a queue which is not mentioned below, the chat interaction will be lost and customers will not be assisted.

The transfer of chat interaction is applicable only in case the customer has reached the incorrect department i.e customer who wants assistance with schedule change rebooking can be transferred to Schedule Change queues.

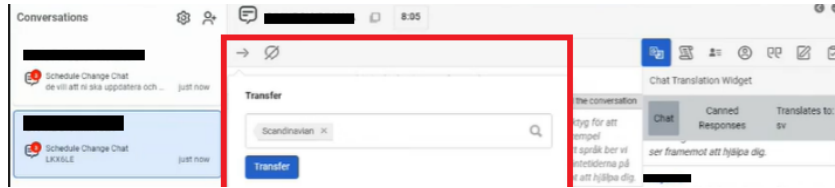

Please note for B.com chat interactions only to dedicated Booking.com queues, customers can be transferred.

Check here the list of the queues and guide on how to transfer an interaction to a correct Queue:

FL/SC Genesys Qs to transfer an interaction and checklist

If you need to transfer an interaction:

- 1. Inform the customer about the change
- 2. Choose the correct language according to the order’s market
- 3. Use the button “Transfer” as per below:

Register errand to be used by FL agents:
Channel: 19: Chat
Category: Depending on the customer's request
Type: 11.Incorrect Department
Action: 1. Interaction transferred to SC
2.Interaction transferred to B.com queue
3.Interaction transferred to VI queue

Register errand to be used by SC agents :
Channel: 39: SC Chat
Category: Depending on the customer's request
Type: 9.Incorrect Department SC
Action: 1.Interaction transferred to FL

For more information regarding errand paths, kindly click [here](#).

Step 3

Solution

Parent step: 1

First login settings - Agent Alias

Last update: 29 Sep 2022

You always need to set a name to use as an alias during web chat interactions. Customers who are interacting with you over web chat see the alias name.

Add an agent name for chat interactions

- 1. From the edit mode in your profile, click **Add new section**.
- 2. Click the **Agent** section.
- 3. In the new **Agent** section click **Edit**.
- 4. In the **name** box, type your whole First Name and the first initial of your Surname. Ex. Maria P.
- 5. Click **Save**.

Note:The agent name will be also used in canned responses for chat .

Step 4

Solution

Parent step: 1

Disconnected chat guidelines

Disconnected chat process

Guidelines are to be followed in case a customer or agent has disconnected the chat interaction.

Most common applicable scenarios.

- Customers who wait in the queue to get connected to an agent on chat but end up leaving the chat.
- Customer being unresponsive due to the long wait.

- Agent disconnected the chat by mistake or due to a technical error.

Always use the channel “chat” for registering errands. Do not forget to include the conversation id.

Important Note: The agents are expected to always follow the FCR in every process which ends when the agents communicate the actions taken toward the customer's request. Therefore, when applicable, the standard template needs to be amended. The customer shall not be motivated/encouraged to contact us again when not really necessary.

If the agent has provided the requested information and the passenger replies after the message with any text (meaning he/she received the message) there is no need to send the email template.

Always remember to send the applicable scripts for idle/closing as stated in this [link](#) before you proceed with disconnecting the chat.

All email templates for disconnected chat scenarios can be found in Edvin in the folder First Line-> Chat and Booking.com->First Line-> Chat

Templates are available in English and in local languages based on the market.

- If a customer from a non-English market contacts us in English on chat, send the email in English.
 - **Example:** A customer from the IT Italian market contacts us in English on chat. Send the email in English.
- If a customer from a non-English market contacts us in a language other than English and the original market language, send the email in the original market language.
 - **Example:** A customer from the IT Italian market contacts us in French on chat. Send the email in Italian.

Applicable scenarios

1. Chat disconnected -Request stated by the customer

- Send an email using the Edvin template “Chat disconnected -Request stated”.
- The name of the customer in the email template is automatically inserted based on the customer's name in the order, not the passenger's. Verify if the person who interacted via chat is the same, otherwise amend the name to match the person who contacted via chat. If not possible to retrieve the name of the customer who reached out via chat leave it as it is.
- Copy the last provided response available in the opened chat interaction in Genesys and paste it into the free text field of the respective template in Edvin. **Attention!** The
- Amend the email in the free text box to provide the information the customer requested.
- Register Errand with **Channel:** *Chat* and the rest as usual routine. Ex. if a customer contacted us to ask about cancellation rules.

Channel

2: Cancellation / refund

▼

Type

☐

1: Ask about cxnl rules

▼

Action

☐

4: Info provided via e-mail

▼

2. **Chat disconnected - No request stated by the customer.-** In this scenario, no email will be sent to the customer.

***Always mention the reason for the chat disconnection in the errand.**

- Register errand with

Channel 19:Chat

Category 43: No response

Type 1. Customer not reached

Action 1. Chat disconnected

3. **Chat has been disconnected due to technical reasons or agents' mistake- no request stated-** In this scenario, no email will be sent to the customer. **Always mention the reason for the chat disconnection in the errand.*

If the agent has closed the interaction by mistake a markdown will occur by QA. Please avoid this kind of scenarios

In case the chat interaction has been closed due to technical error or by mistake and the customer has not communicated the request.

Step 5

 Solution

Parent step: 1

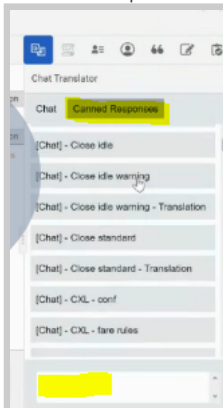

Chat translation widget

When you receive a chat interaction in a language that you are not familiar with, you can use the chat translation widget by following the steps below:

1. Press on the Chat translator:

- The system will automatically translate the message to English.
- Select a canned response or free text:

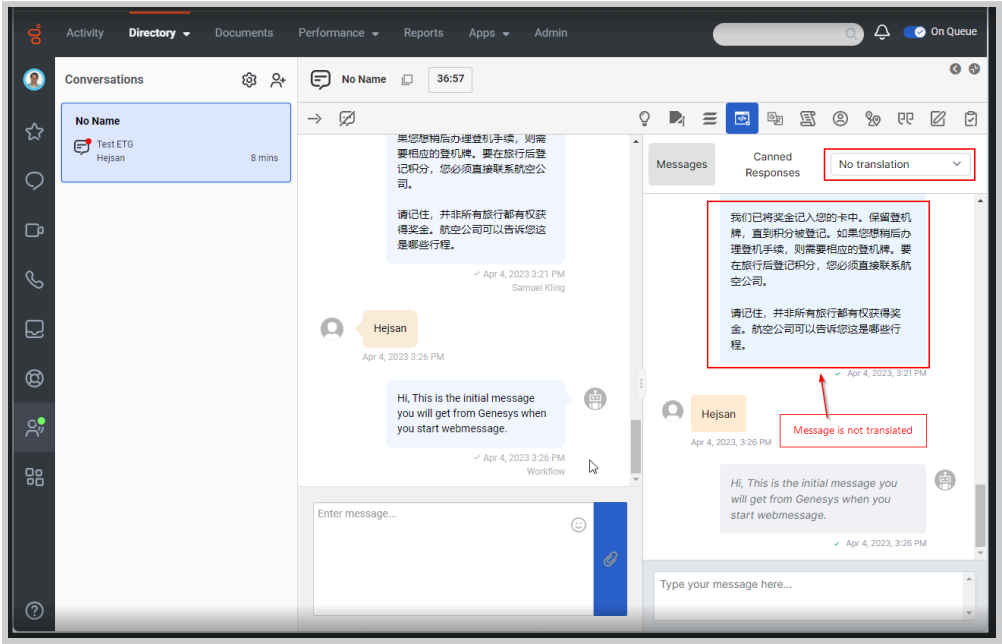

- The system will automatically translate the response to the customer's language.
- Press enter to send.

Translation widget also has the possibility of not translating the messages

If the customer is coming from an English site we default to “No translation”, since usually there is no need to translate messages when it's an English-speaking customer.

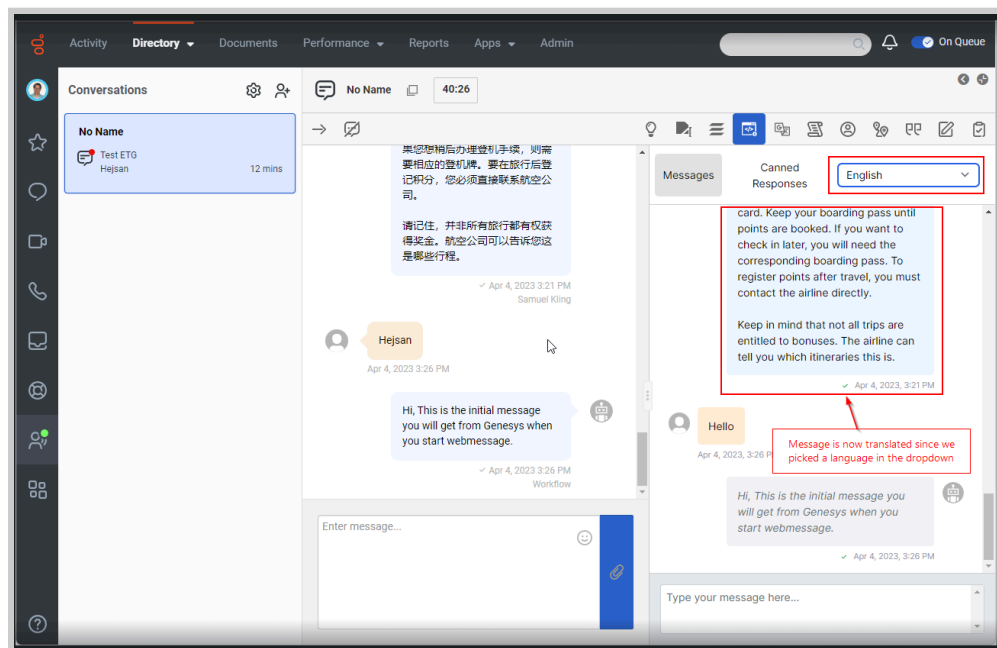

Messages from the customer will not be translated, and messages that the agent types will also not be translated.

This can still be overridden by the agent by changing from No translation to Any language in the dropdown.

In some cases, an agent might want to type in their native language and take advantage of having that translated into English for the customer, which is still possible by selecting English as the language to translate to in the dropdown.

When you change from “No translation” to a language, all previous and future messages from the customer will automatically be translated to English for the agent:

Never paste a Payment Link in the Translation Widget. The Payment Link must always be in its original form and will not be functional after any character the Translation widget may change.

Step 6

Solution

Parent step: 1

FAQ

1. Does the agent need to ask for the order number in case it was already provided in the initial information for opening the chat?
-No need to ask again for the order number if the information included in the chat request (ex. Name of the person in contact and order number) matches the order id. The agent needs to always follow the normal procedure for [security verification](#).
2. Is the agent's introduction mandatory?
- Yes
3. For rebooking requests, does the chat agent need to wait until the passenger has paid via the link, or is it acceptable to send it and close the chat?
- End to end handling if the passenger is able to pay on the spot.
4. Are agents supposed to handle rebookings via chat?
- The agents should handle rebookings and not redirect the customer to call.
5. What should agents do when a customer is asking via chat to call them back?
- The agent should redirect the customer to our call center in this case. Only if an SV callback is requested, the agent needs to follow the already set process.
6. Should the agents add a retention line/ghostline if not already inserted?
-Always insert a retention line/ghost line when the customer contacts us for any request, if not already inserted. If it is a Multi PNR and we only handle the LCC booking/ Portal booking, we still need to add a Ghostline in the GDS PNR.

Step 7

Solution

Parent step: 1

General Information

We are currently **live for FL Support** in:Sweden, Denmark, Norway, Turkey, Spain, Italy, Germany, Austria, Switzerland, France, Belgium, Korea + Arabic, Finnish

We are not currently **testing** in any markets, but we will eventually in other EU countries.

We are currently **live for SC Support** in:

Sweden, Denmark, Norway, Spain, Italy, Germany, Austria, Switzerland, France, Belgium, Brazil (BR), Portuguese (PT), Japanese (Effective 10th Oct 22), Korean, Mandarin/China, Polish and English Websites supporting Arabic markets.

Working hours: 24/7

- Live chat through Genesys provides the option to offer customers immediate assistance.
- Routines and workflows for Chat are as per normal processes.
- No phone calls will be received during the chat task.
- If you receive 1 chat interaction and 1 email interaction reply to the chat first.
- If you receive 2 chat interactions priority to the first chat.
- Maximum 5 minute hold time
- Automatic 2 minutes ACW time after the disconnection of chat, once 2 minutes have passed next interaction will be received (Live on 01 April 2023)
- Always offer an alternative option when the customer's initial request is not possible - when applicable
Some examples...
 - Customer chats to cancel their flight due to FM but we have no TA policy. Offer cancellation as per fare rules as an alternative
 - Customer needs a naco/nach but it is not allowed on the ticket. Offer cancellation as per fare rules if the ticket is refundable and book a new ticket
 - Customer wants to cancel their booking due to FM, but the ticket is non-refundable, check the TA on if an open ticket or a voucher option can be offered

Step 8

Solution

Parent step: 1

Idle time and disconnect

Scenario 1

At the initial stage of the conversation, the customer remains idle.

- The flow goes as follows:
- 2 minutes idle customer you send **Customer doesn't respond 1st Warning ETG/B.com UK**
- 3 minutes later you send **Close chat after no response for 5 min ETG/B.com UK**
- And then disconnect.

Total idle time for customers = 5 minutes

Scenario 2

The conversation has started, we have shared a few pieces of information with the customer, and all of a sudden the customer is idle.

For example, for a rebooking request, we do the pricing and ask the customer if he/she is interested in paying. Or cancellation requests, we share the penalties and ask the customers for confirmation to proceed. And the customer rests idle.

The flow goes as follows:

- **Agent asks if the customer wishes to proceed with the next action or waiting for a reaction from the customer. The customer remains idle.**
- 2 minutes idle customer you send **Customer doesn't respond 1st Warning ETG/B.com UK**
- 3 minutes later you send **Close chat after no response for 5 min ETG/B.com UK**
- And then disconnect.

Note: If the agent does not come back to the customer within 3 minutes (as stated in the 1st warning script) the agent can delay a maximum of 5 minutes to send the "No response for 5 minutes" script.

The maximum acceptable total idle time of customer is 7 minutes.

Scenario 3

The request has been replied to (for example, rebooking completed/cancellation completed), everything is done and the customer remains idle.

- Agent shares the chat script **" Question before closing ETG/B.com UK"**.
- 3 minutes later you send **Close chat after no response for 5 min ETG/B.com UK**
- And then disconnect.

Total idle time of customer 3 minutes.

After the disconnection, the customer can no longer reply to the same thread.

Step 9

Solution

Parent step: 1

Replying to interactions

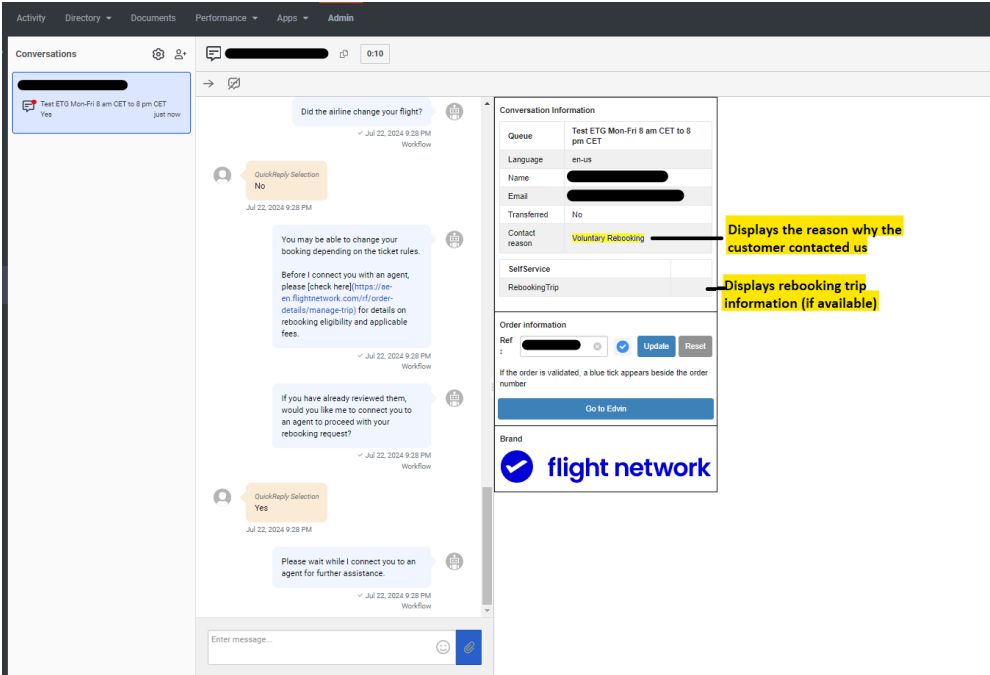

Page last updated on January 24, 2025

- Chat scripts are available in Genesys and it is **mandatory to use Genesys canned responses** while responding to the customers.
- Scripts can be also found [here](#).
- Always start the reply by introducing yourself.
- When receiving a transferred interaction the second agent should use the script titled **[Chat] Chat Opening (asking to wait) ETG/B.com UK**
"Hello, {{CUSTOMER_NAME}}, my name is <Agent First Name> Please give me a moment to review your request." There is no need to ask again the customer what is his/her request. The agent can retrieve the details of the request that was stated to the first agents, via Genesys or via the communication tab in Edvin.
- Wrap-ups to be used as per normal routines.
- In case of SC request, redirect the customer interaction to the Schedule change Chat queue.
- [In case of a CR request, redirect the customer to our contact form for CR claims.](#)
- The agents need to reply to the interaction within 1 min and if there is any delay in replying to the customer then there will be a markdown from QA
- While handling the chat interaction always remember to check the communication dashboard in Edvin and close any dupe/already handled emails/chat interactions.
- Do not use shortenings.
- Please verify if the customer has already inserted the desired flights using the Self Service Rebooking link [here](#). There is no need to request the flights again.

Here are the instructions for handling chat interactions via the Chatbot:

- 1. **via Chatbot:**
 - If the chat is initiated through the chatbot, it will include the "Reason for contact."
 - Do not ask the customer "How can I help you?" since the reason for contact is already mentioned.
 - Currently, the chatbot is live for the German, French, English, Italian, Norwegian, Portuguese (Brazilian), and Swedish markets.
- 2. **Chats without "Reason for Contact":**
 - If the chat interaction does not have the "Reason for contact," ask the customer for the reason using the "Chat Opening (asking to state the request)" script.

Refer to the screenshot below for an example of a chat with the "Reason for contact" included.

Step 10

Solution

Parent step: 1

Register Errand

Always use the channel "chat" for registering errands. Do not forget to include the conversation id.

If the customer is not replying within the idle time or is disconnected before being assisted/provided any information then register the errand:

Register Errand

Channel	☐ 19: Chat
Category	☐ 43: No response
Type	☐ 1: Customer not reached
Action	☐ 1: Chat disconnected

[Add \(Alt\)](#)

Step 11

Solution

Parent step: 1

How chat works?

1. Customer gets to the contact page on our website.
2. Selects the "Chat" option.
3. Fills in the required information:

- Name
- Order number
- Email address

And additionally they can also type in their query

4. The customer receives an autoreply informing we will respond as soon as possible.
5. Chat interaction pops up in Genesys for the available skilled agent.

For the markets Sweden, Denmark, Norway, Germany, France, customer need to reply extra two questions to divide the Schedule change queries:

Extra questions to reply:

- Is your request related to any unexpected events such as Covid, strikes or weather conditions ?
Yes Display under FL inbox
No Display the next question
- Did the airline change or cancel your flight ?
Yes **Display under SC inbox**
No Display under FL inbox

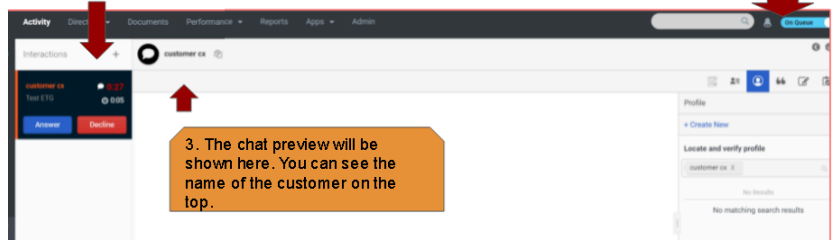

Live-chatt

Förnamn	nikos
Efternamn	Tillval
E-post	ikos@gmail.com
Ordernummer	Tillval
Is your request related to any unexpected events such as Covid, strikes or weather conditions?	Nej
Did the airline change or cancel your flight?	Nej

Receiving interactions

2. When alerted an interaction, will pop up. You will see a preview of the chat. To start the conversation, click on "Answer".

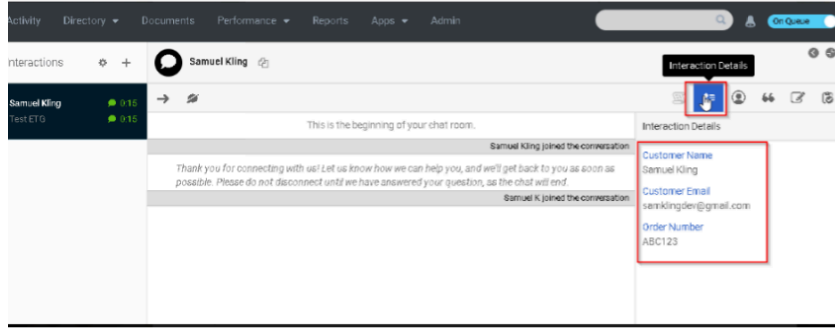

1. To start receiving interactions, set the toggle to On Queue.

3. The chat preview will be shown here. You can see the name of the customer on the top.

Live Chat Workflow- Check customer's information

4. To check the information customer submitted when initiating the chat, click on Interaction details:

5. The interaction pop up turns into green once the agent accepts it.

6. This is how it appears to the customer.
