

Email Alias Platform - EALP (ex OTRs)

Live date: December 18, 2024

- 1. ? Alias Platform:
- 2. ? Login to portal
- 3. ? Search button
- 4. ? Folders name
- 5. ? Forward
- 6. ? Display the email
- 7. ? Move
- 8. ? Associate
- 9. ? History

Step 1 - Starting point

Question

No linked steps

You are probably all well aware that we have been facing multiple technical issues when using the OTRS platform. For this reason, a new initiative has been created and developed within ETG, and a new platform has been introduced for the same reasons/ actions we had for OTRS.

The new tool is called **“Email Alias Platform”**, and it has the same logic and functionalities as OTRS. The two things changing are the user interface and the simplicity of fulfilling the necessary actions as required. Within this platform, all FL/ SC agents will have access and will be assigned to specific folder categories depending on the task. Everyone will also have access to the “OTRS” tab in Edvin, where nothing changes for the user.

You can see how the tool works in more detail on this page.

Alias Platform:

- | | |
|------------------------------|--------|
| 1. Login to portal | Step 2 |
| 2. Search button | Step 3 |
| 3. Folders name | Step 4 |
| 4. Display & Action an email | Step 6 |

Step 2

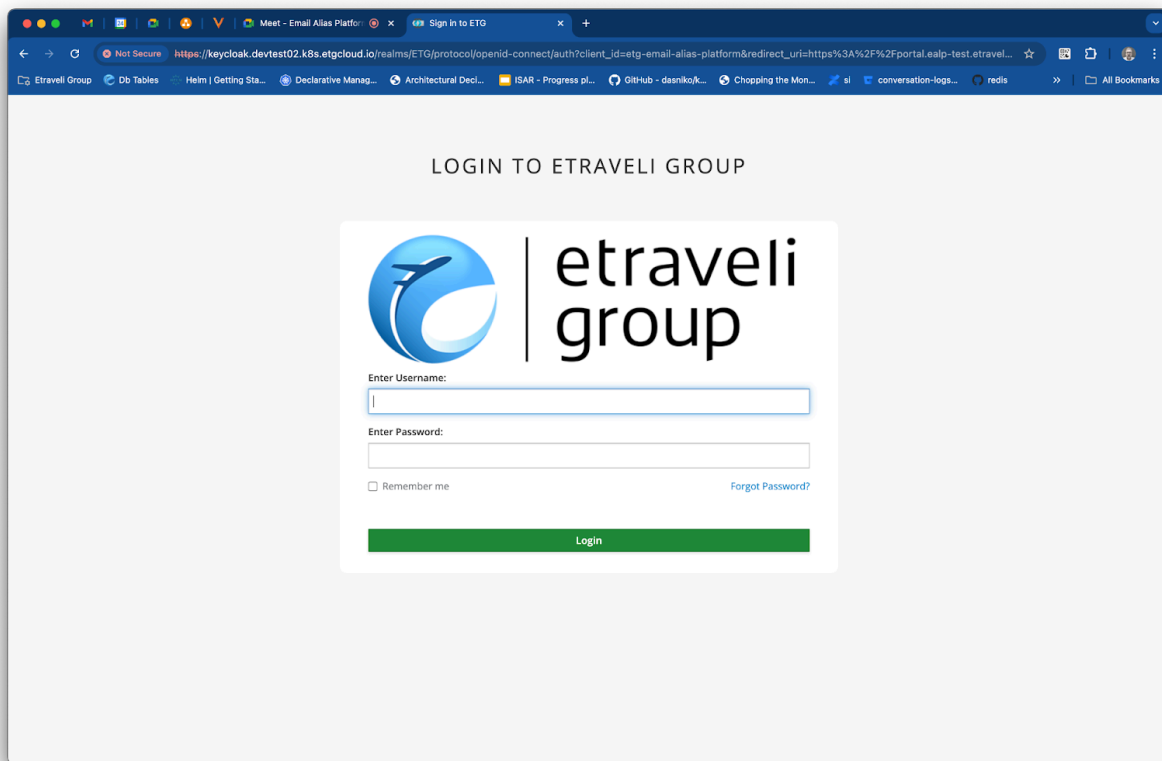

Solution

Parent step: 1

Login to portal

Open [Alias Platform](#)

Use Edwin Credentials to login to the new platform of Alias:

Step 3

Solution

Parent step: 1

Search button

In the alias platform, agents have the possibility to search for an email in two different ways.

- A general search for all active & inactive emails To be used when the agents are not aware in which folder the email is located.
- Search in a specific folder To be used only when the agent is sure that the email should be found in the specific folder.

Additional Information:

- Under one sender address and subject, there might be different order references connected, since the carrier might send email notifications in bulk to different addresses/customers. In such cases, please forward the email to all those recipients who hold a booking with us and are affected by this action,

according to the associate orders (Example: after association, use the correct signature of the order). However, you can request a bulk action such as move/archive from your TLs as they are the only ones who have the right to perform such action.

Search in a specific folder:

First select the folder that is to be used, and then start the search details:

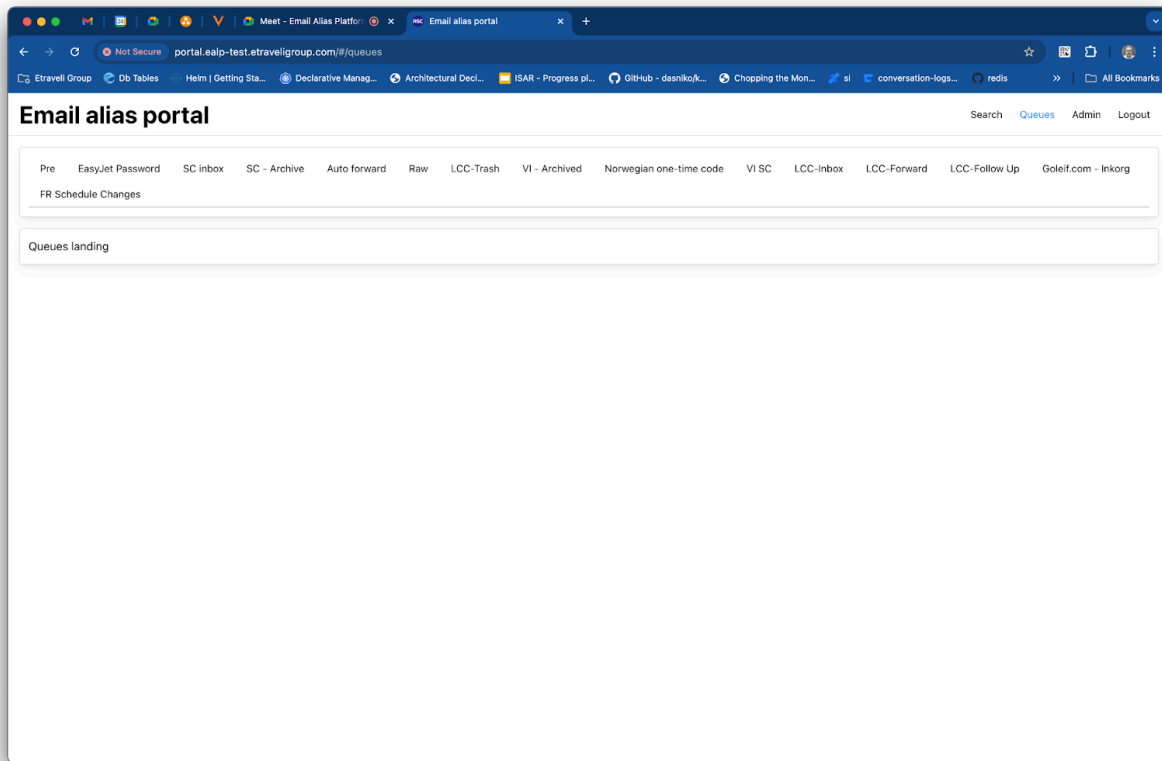

Step 4

Solution

Parent step: 1

Folders name

Throughout the above platform, you can display all the emails received from the carriers or consolidators in regards to the NDC and LCC notifications.

- **RAW** From this folder, the Edvin system picks up the emails and applies any rules that might be found.
- **Auto Forward** Once the rule is configured, the email is transferred from the “Raw” folder and auto-forwarded to the customer without agents interfering.
- **LCC Inbox** LCC Inbox shows all the emails received from various airlines. The LCC/SS agents either forward emails to customers or send it to LCC Trash.
- **LCC Forward** *not used by Fulfillment*
- **LCC Follow Up** *not used by Fulfillment*
- **LCC Trash** Emails that LCC/SS agents do not forward to customers are forwarded to this folder both bulk or single emails.
- **SC Inbox** The Edvin system place the email from the “Raw” folder, wherever manual handling is required for a schedule change case
- **SC Archive** The agents move the cases to this folder, once they handle the case from the SC inbox.
- **VI Inbox** The Edvin system place the email from the “Raw” folder, wherever manual handling is required for a VI schedule change case
- **VI Archive** The agents move the cases to this folder, once they handle the case from the VI inbox
- **Norwegian One-Time Code** The Edvin system places the email in this folder wherever a one-time code from the Norwegian portal is required (automatically for all the alias emails).
- **EasyJet Password** The Edvin system places the email in this folder wherever a one-time code from the EasyJet website is required (automatically for all the alias emails).
- **FR Schedule Changes** The Edvin system places the email from the “Raw” folder, wherever manual handling is required for a schedule change case with Ryanair airline.

Depending on your task, you will be able to access the relevant folder/category.

Step 5

Solution

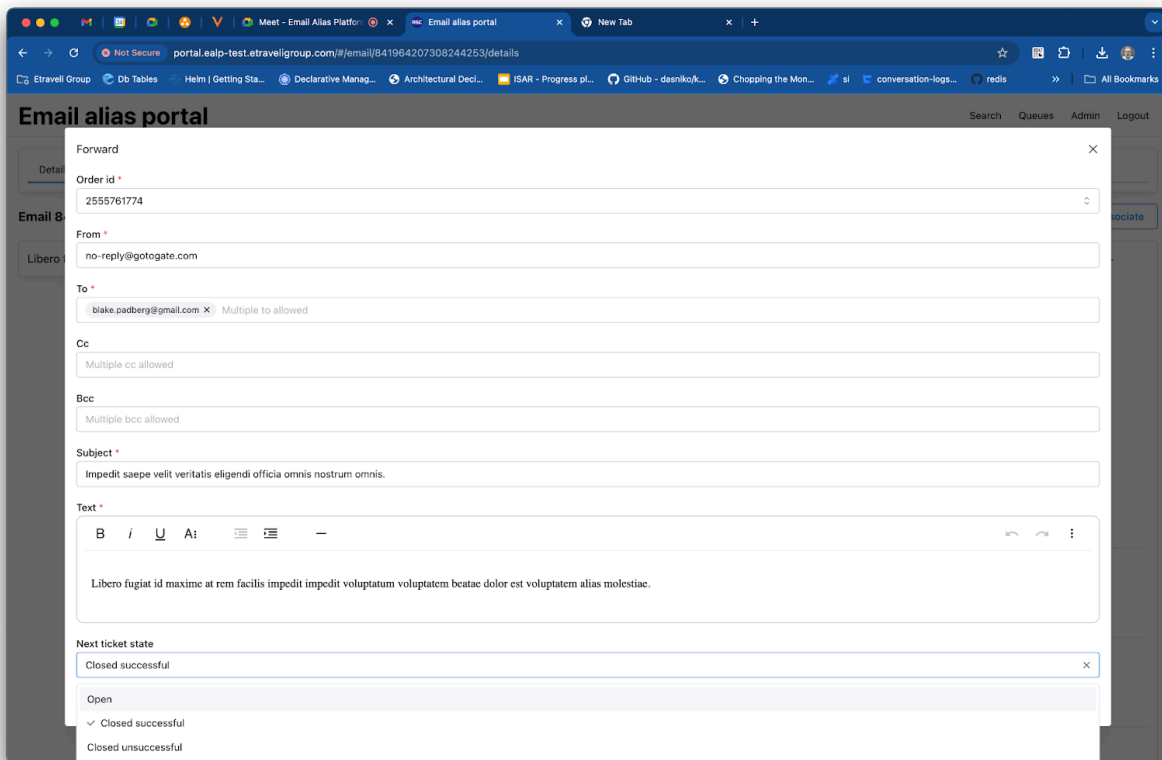

Parent step: 6

Forward

Forward Agents can forward the email to the customer's address, as per his request.

In case the agent needs to forward the email to the customer:

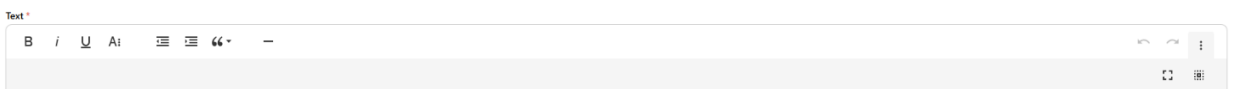

1. First of all, he/she should select the order ID. Note that it might be preselected if the email has already been associated with it.
2. The agent should NEVER change the “From” sender, since it will be automatically added by the system as “no-reply”
3. The agent should then double-check the email of the recipient “TO”.
4. Then, the agent should edit the text and delete any information that the mail is forwarded.
5. Last, select the next ticket state as “closed successfully”.

The screenshot shows the 'Email alias portal' interface. A 'Forward' modal form is open, displaying the following fields:

- Order id ***: 2555761774
- From ***: no-reply@gotogate.com
- To ***: blake.padberg@gmail.com (Multiple to allowed)
- Cc**: Multiple cc allowed
- Bcc**: Multiple bcc allowed
- Subject ***: Impedit saepe velit veritatis eligendi officia omnis nostrum omnis.
- Text ***: Libero fugiat id maxime at rem facilis impedit impedit voluptatum voluptatem beatae dolor est voluptatem alias molestiae.
- Next ticket state**: Closed successful (selected), Open, Closed successful (checked), Closed unsuccessful.

Note that from the below menu, the agent has the option to minimize or maximize the screen:

The screenshot shows a 'Text' editor toolbar with various formatting options (B, i, u, A, list, link, quote, indent, outdent) and window management icons (minimize, maximize, close) on the right side.

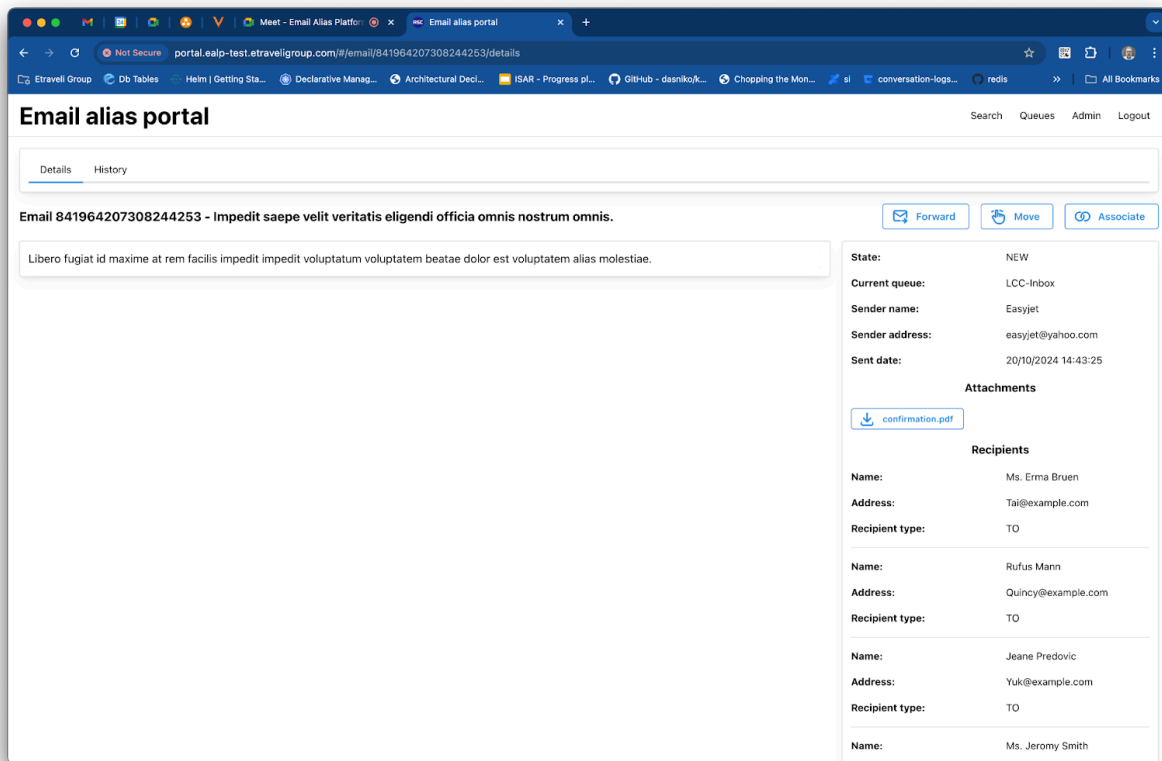

Step 6

Question

Parent step: 1

Display the email

Click on the email and open it:

What can you do with the email?

1. **Forward** Agents can forward the email to the customer's address, as per his request.
2. **Move** Agents can move the email to another folder. For example, to present an action that they did: archive or forward.
3. **Associate** Agents can link the email with an Edvin order, usually it should be used for generic emails when the email is not connected with the orders. Once it is done, note that it is not possible to undo the action. If the email has multiple recipients, you can associate them with multiple Edvin orders.
4. **History** In the email, you can view the history of the email, download it (as it was sent), and share it with any other required parties as proof of action.

Select your action:

1. **Forward**

Step 5

2. Move

Step 7

3. Associate

Step 8

4. History

Step 9

Step 7

Solution

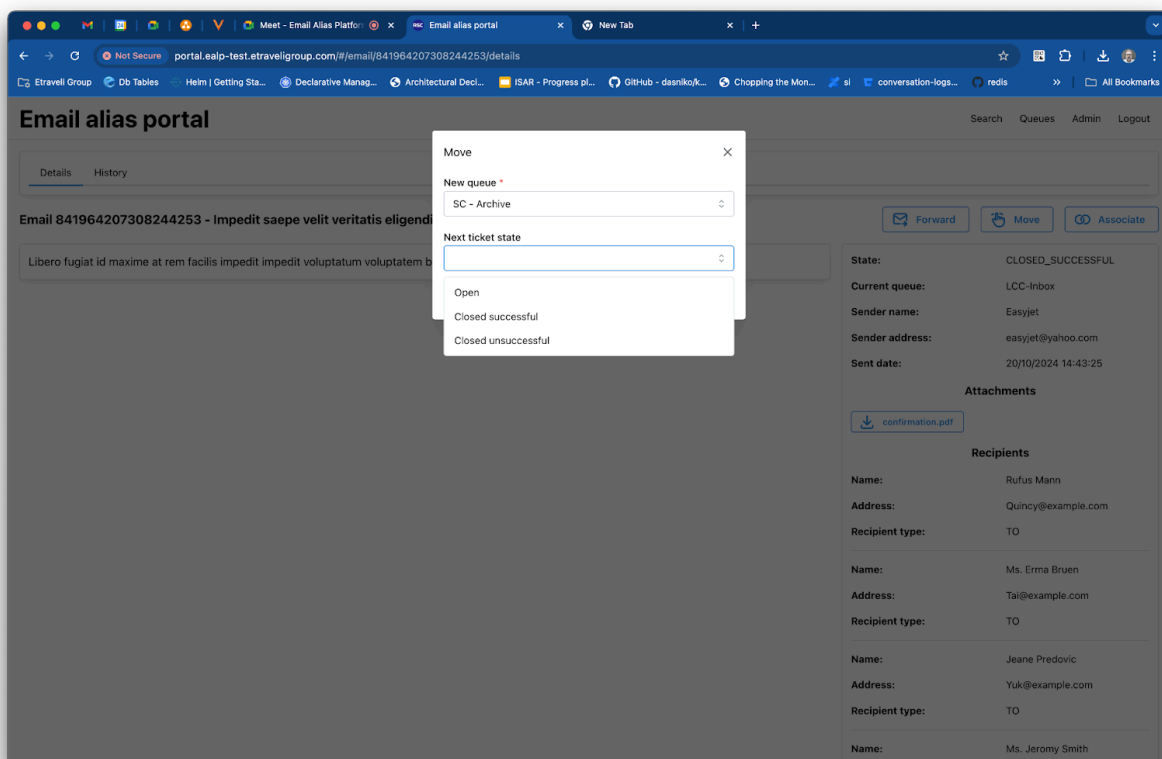

Parent step: 6

Move

Move Agents can move the email to another folder. For example, to present an action that they did: archive or forward.

Move the case from one folder to another & Archive action

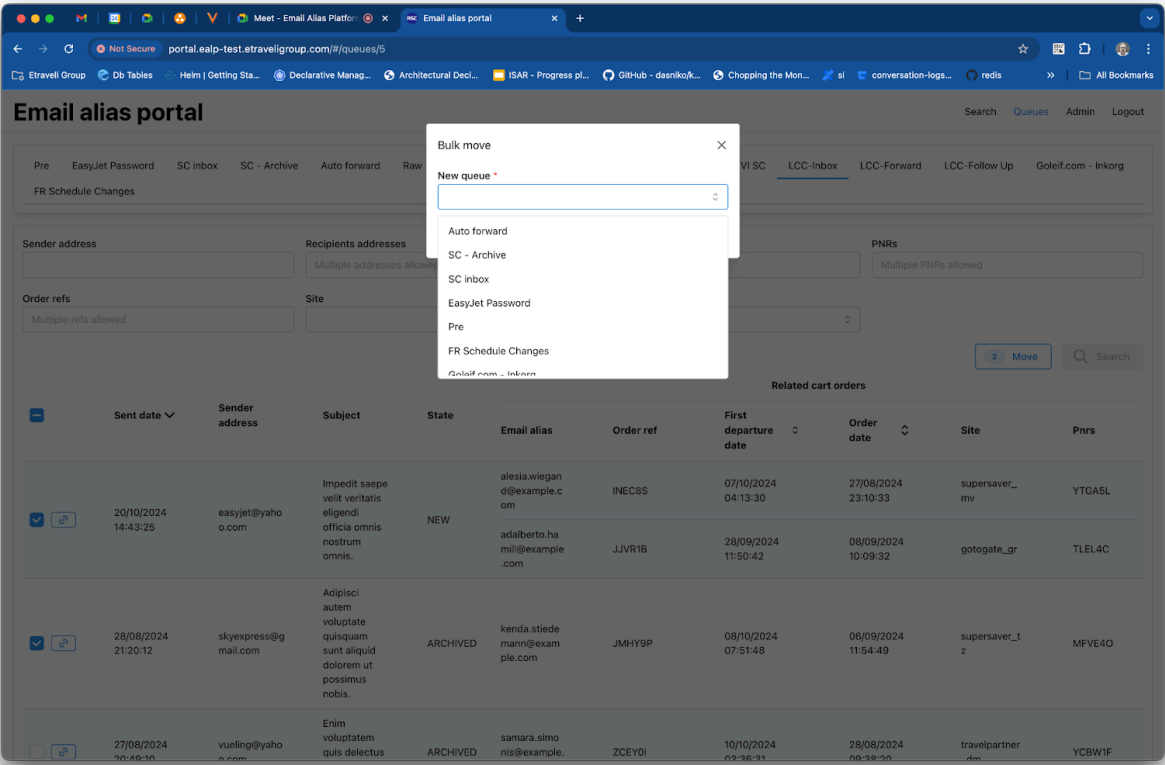

- Select the folder in the email that needs to be moved
- Select the next ticket status:
 - **Open** The system uses the status wherever “Move” the case to another folder for manual handling. No handling is done.
 - **Closed successful** It should be used by the automation or agents, wherever the email is handled and no other action is required.
 - **Closed unsuccessful** It should be used by the automation ONLY, wherever the rule to handle email is failed.

Bulk Action:

Only FL Leads/Managers/WFM can make the “Bulk action” by selecting them in the folder and adding the above-mentioned actions.

The Fulfillment team all have access to perform “Bulk action” when necessary.

Note that you might view in this function some folders to which you do not have access.

Step 8

Solution

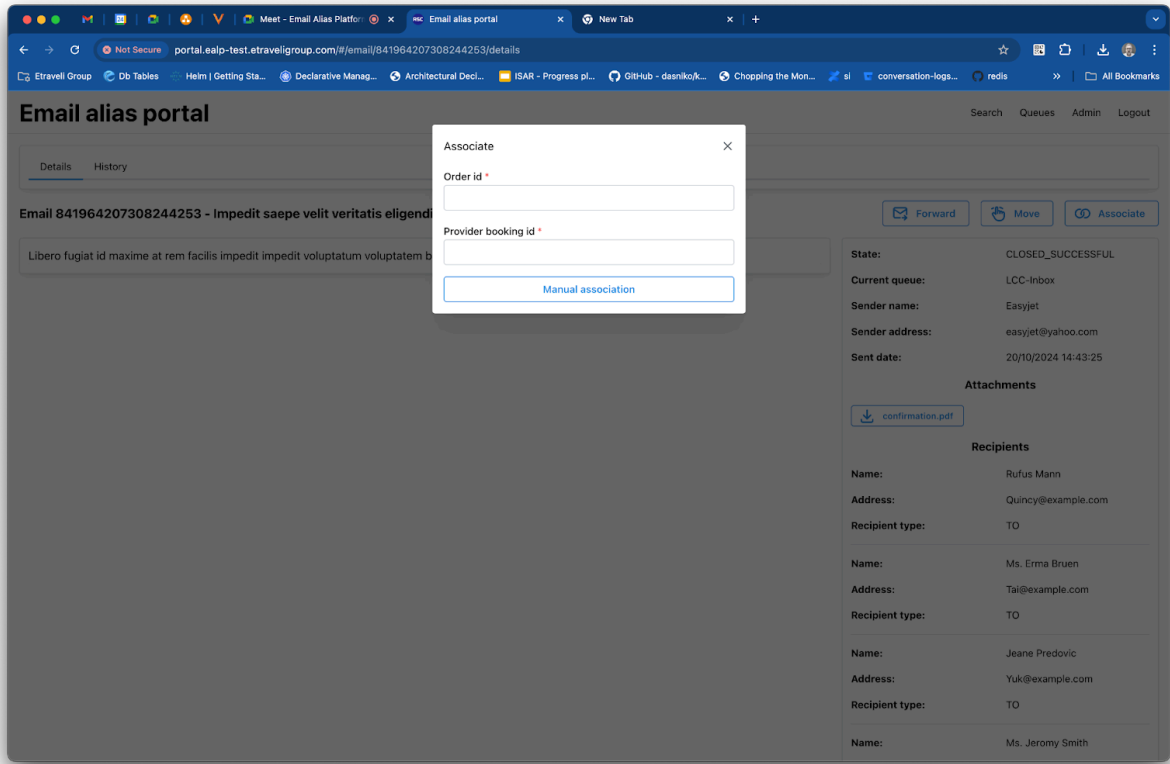

Parent step: 6

Associate

Associate Agents can link the email with an Edvin order, usually it should be used for generic emails when the email is not connected with the orders. Once it is done, note that it is not possible to undo the action. If the email has multiple recipients, you can associate them with multiple Edvin orders.

Associate the email with Edvin Order:

In order to associate the email with an order, you can copy the order number or the provider number (PNR) and paste it into the field:

PAY ATTENTION TO THE ASSOCIATION. Once it is connected to the Edwin order, you cannot re-associate it.

Step 9

 **Solution**

Parent step: 6

History

History In the email, you can view the history of the email, download it (as it was sent), and share it with any other required parties as proof of action.

How to display the history:

Please note that the history is displayed from top to bottom and cannot be rearranged in reverse order.
