Exceptional rebooking scenarios per airline

Exceptional rebooking scenarios per airline

- 1. United Airlines (UA) Unused refunds

Step 2

Step 2

Solution

Parent step: 1

Exceptional rebooking scenarios per airline

United Airlines (UA) Unused refunds:

We have identified an issue where a large number of United Airlines (UA) tickets have been refunded as Unused (NSR), while the customers had actually left the tickets open for future use. A set of instructions was created to handle these tickets, and the orders that are eligible for this handling have been marked with a specific errand note (see Step 1).

Note: We are not taking proactive actions for these orders; instead, we will be handling each case when/if the customers contact us on their own.

Handling steps:

- 1. Confirm that it is a UA NSR affected order via the errand/note

System Internal

United Airlines NSR
affected order

UA NSR case - Order eligible for discount voucher for UA TKT value, if no payout done for UA PNR to the pax; see Shelf for handling instructions:
<https://etraveligroup.shelf.io/read/2b097569-91e3-48e6-93f0-dca5ad99d026>

- 2. Explain to the customer that the booking was canceled and automatically handled as an old order by our system, however we can offer a discount code for the entire value of the UA tickets with specific criteria (see 2.b.)
 - a. Use the following **script**:
"I see that your departure was scheduled for [XX] months ago. Unfortunately, we didn't hear from

you on how to proceed with your reservation. Therefore, your booking was canceled and automatically handled as an old order by our system. I understand you'd like to rebook your trip and I am happy to help. To solve the issue, I can offer you a discount code for the entire value of the ticket, which can be used to book your trip with the same airline, and follow the same policies offered by the carrier for your original ticket.

Please note that this code is provided by us and can only be used on <BRAND> website where you made your original booking."

b. Voucher criteria:

Voucher must be used at the **website** the original ticket was bought from, and must be **used once** (i.e. cannot use part of the voucher amount now and the rest later)

Voucher amount must be the **total TKT value** for **UA PNR** (not the whole order in case of multi-PNR orders), and only **one voucher** will be issued **per order** and **for all passengers**

Carrier must be **United Airlines (UA)**

Travel must **begin** before **31-12-2022**

Travel must be **completed** until **31-12-2023**

3. In order to have the voucher issued and sent to the customer, use the [RL Jira due to Other](#) step-by-step instructions to request the reason code, with the following details:

- The Jira type should always be **Other**
- The Jira should be assigned to **Birgitta Gustavsson**
- Mention in the description clearly that it is a UA NSR case and make sure that the amount of the discount voucher is equal to the total UA TKT value for the order (only for United Airlines tickets)
 - The Manager/TL/Supervisor (for the time being Birgitta) will approve and create the discount voucher. The RL Jira will have reason code "NSR Process" and Resolution note "UA NSR + free text"
- After the voucher is created, follow the rest of the RL Jira routine as normal

Note:

- The above steps apply for **Inhouse** and **Support** agents.
- **Outsourcing agents** should use the [Service desk routine](#) to make the request. The Type request should always be Authority/Reason code with the following details

Summarize the problem:

UA NSR affected order + PNR

Describe the problem:

Kindly create a RL Jira with the following details

Jira type: Other

Assignee: Birgitta Gustavsson

Order number:

Total amount of the United Airlines (UA) TKT value: Amount & Currency in GDS OID/PCC
