Step 2

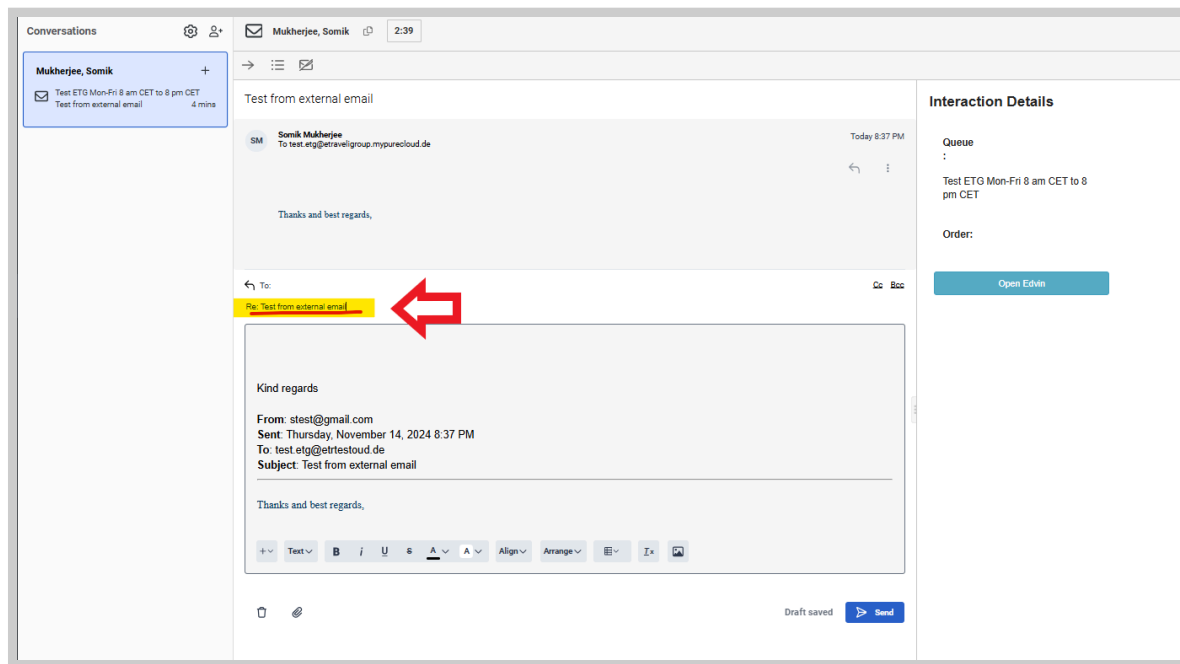

Solution

Parent step: 1

General Information

- All agents are expected to check the communication hub while handling emails and close any already handled/dupe interactions.
- Email cases/Interactions pushed to the agent; no manual picking from queues.
- Emails and phone calls are treated and measured the same way - as Interactions.
- Always insert a retention line/ghost line when the customer contacts us for any request, if not already inserted.
If it is a Multi PNR and we only handle the LCC booking/ Portal booking, we still need to add a Ghostline in the GDS PNR.
- One queue for all channels; no specific email queue.

- Agents will receive a mix of phone and email interactions unless skills are changed on the agent level.
- Genesys detects language from text and routes it to the corresponding queue.
- Edvin API will give higher priority to orders with departure within 3 days.
- 1 active email interaction at a time.
- Agents will place email interactions on Edvin support when a case needs further investigation, but email always needs to be responded to with the correct template.
- No internal recategorization.
- Cases that need handling by our Schedule Change department will be transferred to the Schedule Change Queues accordingly, the same way as we do with phone call interactions. See below for more details on the SC transferring.
- The time displayed is the local time of the agent.
- Always reply in English if the customer has written in English no matter what market he/she has booked on.
- Always offer an alternative option when the customer's initial request is not possible - when applicable.
Some examples:
 - Customer emails to cancel their flight due to FM but we have no TA policy. Offer cancellation as per fare rules as an alternative.
 - Customer needs a naco/nach but it is not allowed on the ticket. Offer cancellation as per fare rules if the ticket is refundable and book a new ticket.
 - Customer emails to cancel their booking due to FM, but the ticket is non-refundable, check the TA on if an open ticket or a voucher option can be offered.
- We do not handle **Voluntary** Rebooking requests over email - the customer must phone in.
- Always make sure that the order number is stated in the subject field. If the order number is not stated but we have received it in the email from the customer the agent should add it in the subject field:
 - Click on the highlighted subject and Edit the subject line before sending an email:

- Always reply to all the customer queries.

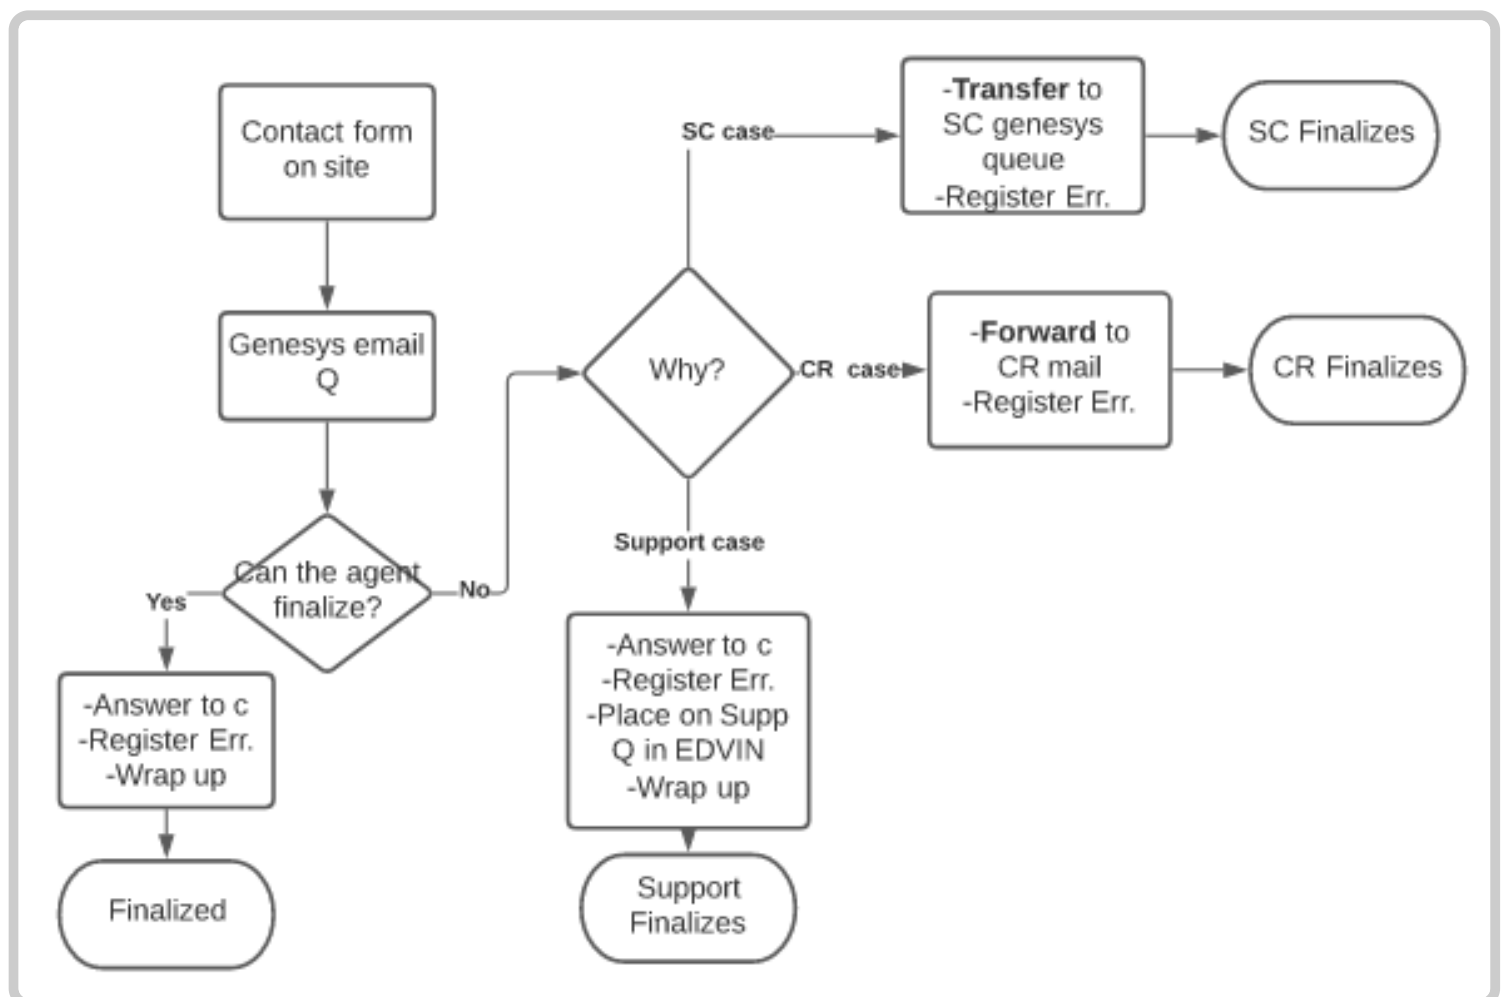

Step 3

Solution

Parent step: 1

Email Flowchart

Step 4

Solution

Parent step: 1

Receive Interaction

1. To start accepting interactions, set the toggle to On Queue.

2. When alerted an interaction, a popup will appear. It will show what queue the email is routed from. You will see a preview of the email. To accept the email, click Answer. If declined, the email goes back to queue.

Step 5

Solution

Parent step: 1

Reply to an interaction

Once you have accepted the interaction, you will see how long time you have spent on the interaction.

To begin answering the customer, click Reply All.

Step 6

Solution

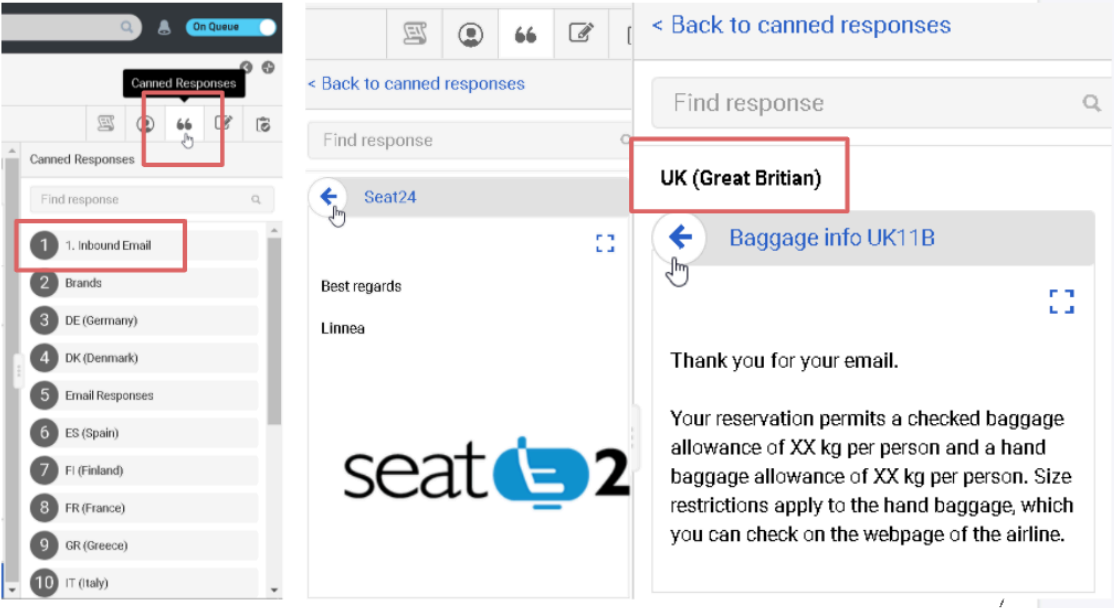

Parent step: 1

Use Canned Responses (templates)

To insert branding and templates, go to Canned Responses. Choose your brand and press the arrow to insert.

Click your language and insert the template you want to use by clicking the arrow.

Currently the 24 most used templates are added to Genesys.

Step 7

Solution

Parent step: 1

Cases related to CR

Page last updated on May 30, 2022

Please refer to [Email handling for Genesys](#)

Step 8

Solution

Parent step: 1

Transfer SC interaction to Genesys email SC queue

In case you find an SC email interaction incorrectly queued to FL you need to press Transfer and transfer it to the correct queue. Always pay attention to all the columns in order to transfer correctly the case (ex: Type of order, system, channel).

Transfers of emails between languages are not permitted. As we have a translation widget in Genesys.

The available Genesys queues to transfer an interaction can be found here: [FL/SC](#)

Genesys Qs to transfer an interaction and checklist

When a Schedule change occurs on Galileo, VI, and/or FLX bookings, you should:

1. Reply to the customer that the case is forwarded to support and use wrap-up code: "Escalated".
2. Place on Edwin queue-SC tab based on the type of SC:

Queue Place

Fraud Products Refund **SC** Social Media Support Support ATH Support B2B
Support CNX Support ETC BOM Support UPA UPA TKT Support WNS BOM TKT CR-UPA
Payments Technical **Show All**

SC

☐	BOM SC support	Farelogix for LHG/AA/A3/OA, Galileo, IAG, Avia center, AF/KLM (own Portal)	BOM SC support
☐	BOM VI SC support	VI pnrs (virtually interline)	BOM VI SC support
☐	SC RU Support		SC RU Support

3. Always include the customer's request both in the Errand and in the order note to the SC support.

Step 9

Solution

Parent step: 1

Wrap-up codes

Genesys email interactions are considered finalized only when you reply to the customer and select a wrap-up.

The available wrap-up codes are:

1. Transferred

To be used when the email interaction has been transferred to a different Genesys email Queue for handling.

2. Escalated

To be used when we have informed the customer that the case has been forwarded to our Support team and has been placed in one of our Edwin Support Queues.

3. Prioritized

To be used for:

- Void/24-hour rule cases.
- When a customer contacts us by mail for cancellation with departure within 3 days and it is possible to cancel the booking **against a fee**.
- For rebookings due to FM or tickets close to the expiration date where the change should be completed within 3 days.

- When handling voluntary cancellation requests for tickets that expire within 3 days.

When a customer contacts us by mail for all the scenarios above, the agent shall first try to contact the customer by phone to assist.

- Agents will attempt to contact the client and try to assist in EN. If the passenger can communicate then the case can be finalized in that step.
- If the client can not understand EN, then the agents must send a fixed template (1 per scenario) with the request to the passenger to contact us via phone instead.

Important: If the customer **clearly requests cancellation and a full refund is granted as per Edwin Covid-19 Docs** then proceed with the Modify order without waiting for the customer's consent, disconnect the interaction, and send conf of cxl through Edwin.

How to proceed when the customer confirms the cancellation

The agent disconnects the email interaction and sends confirmation of cxl through Edwin, Runs Modify order, and registers an errand with 'Mail in' where it is clearly stated that the customer was contacted by phone to confirm the cancellation.

How to proceed if there is no answer by the customer on the phone

The agent replies to the Genesys email and adds a sentence that we have tried to reach the customer by phone without any answer.

-For rebookings due to FM or tickets close to the expiration that **change the need to be completed within less than 48 hours:**

Reply to the customer to reach us by phone a maximum of 12 hours before the deadline given by the airline and use the wrap-up Prioritized.

- For voluntary cancellation requests on tickets that are **close to the expiration date** and the ticket can be canceled against a fee.

a) If the customer's request reached us in less than 3 days but more than 24 hours before the expiration date and the cxl can be done against a fee (by fare rules), inform the customer regarding the airline's penalty, our handling fees and give a deadline to confirm the cancellation (maximum 24 hours before the tkt expiration date). Use the Wrap-up Prioritized.

b) If the customer's request reached us less than 24 hours before the expiration date and the cxl can be done against a fee then inform the customer regarding the airline's fees, and our handling fees, advise to reach us by phone (maximum 12 hours before the tkt exp date) to confirm the cxl and use the Wrap-up Prioritized.

How to proceed if the passenger answers the phone but does not confirm the cancellation

The agent answers the email according to the above routines and adds the wrap-up prioritized.

How to proceed when the customer confirms the cxl for tickets that expire within 3 days

- a) If the ticket expires within 72 hours then disconnect the interaction, run Modify order, send conf of cxl through Edvin, and use the label 'Expiring within 72 hrs'.
- b) If the customer has confirmed the cxl after the expiration date then inform the customer that he/she is not entitled to a refund.

If the above process has been followed correctly and we have missed handling the customer's cxl request please note that the loss should not be covered by us since in Genesys there is an auto-reply mentioning: *"If you have not been in contact with us or have not received a cancellation confirmation from us 72 hours before departure, please contact the airline to cancel the ticket."*

Already Handled

To be used for:

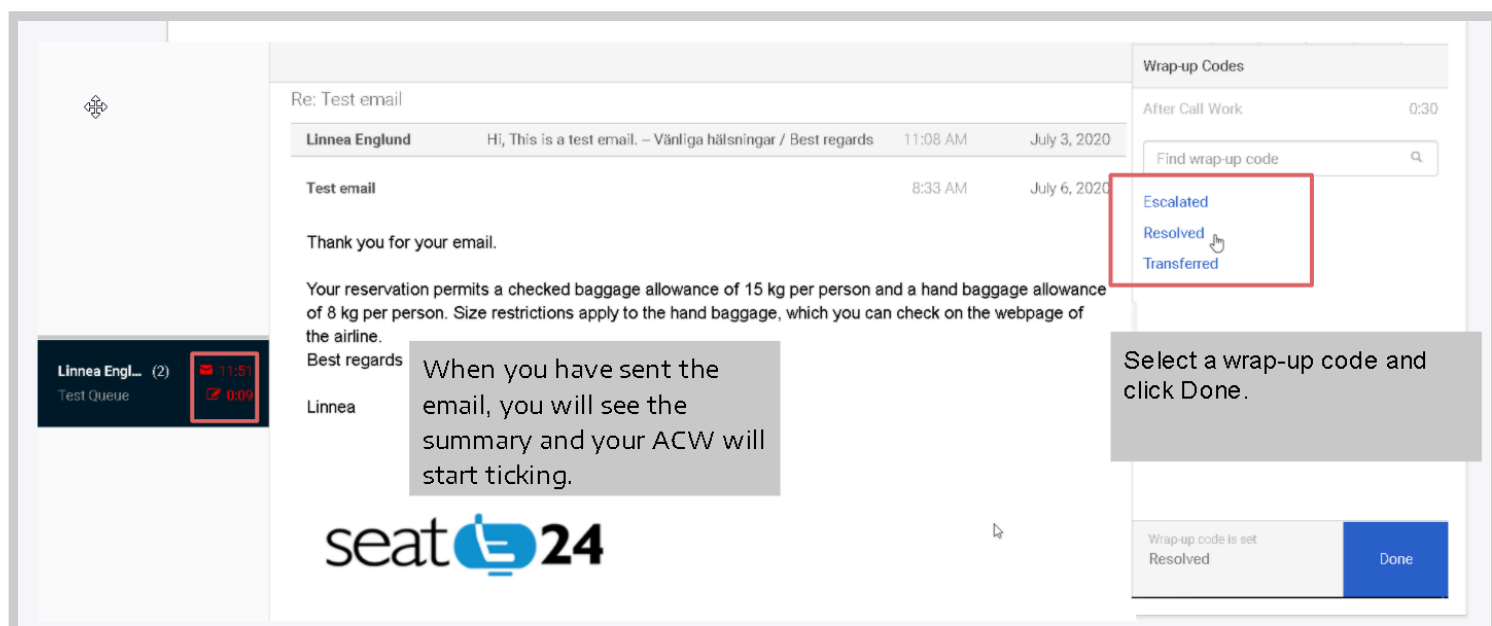

- Past date flights
- Tickets that the request has already been handled with the airline.
- In case of past-dated flights where we did not reply on time to the customer's request, then use the canned response with the title: **"Late response - already traveled 32.D"** and then add the Already handled wrap up.
- If a customer writes an email to us but later calls regarding the **same query** and he/she never received a response on the earlier mail query.

Step 10

 Solution

Parent step: 1

Finish an interaction

The screenshot displays the Genesys interface for finishing an interaction. On the left, a sidebar shows a contact list with 'Linnea Englund' (2) and a 'Test Queue' with a timer at 11:51 and 0:09. The main area shows an email thread titled 'Re: Test email' from 'Linnea Englund' dated July 3, 2020. The email content includes a greeting, a thank you, and baggage allowance information. On the right, a 'Wrap-up Codes' panel is visible, with a search bar and three options: 'Escalated', 'Resolved' (highlighted with a red box and a mouse cursor), and 'Transferred'. Below this panel, a grey box instructs: 'Select a wrap-up code and click Done.' At the bottom right, a status bar shows 'Wrap-up code is set Resolved' and a blue 'Done' button. A 'seat 24' logo is at the bottom center. A grey callout box on the left side of the email thread states: 'When you have sent the email, you will see the summary and your ACW will start ticking.'

Step 11

Solution

Parent step: 1

How to register errand correctly

The conversation ID **needs to be included** in the register errand when handling an email interaction. Below you may find how to copy the conversation ID **when the email is still open**:

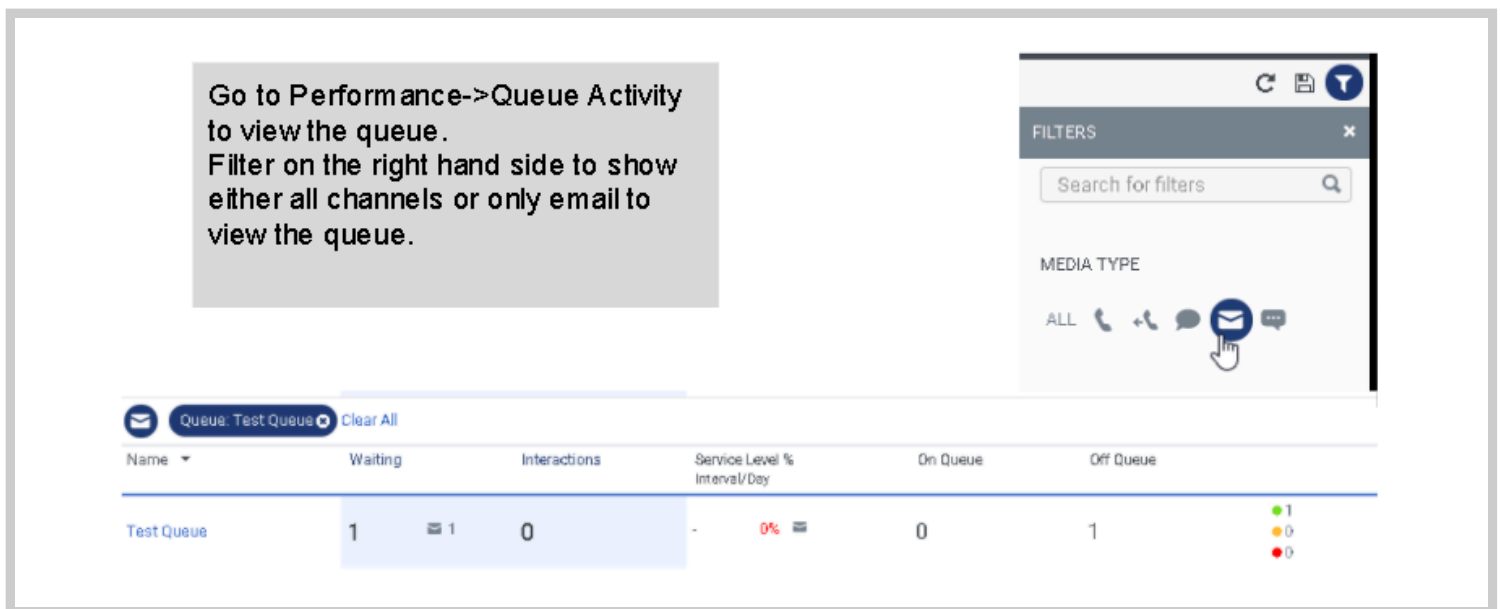

Step 12

Solution

Parent step: 1

View email queue

Step 13

Solution

Parent step: 1

View an interaction

Audit Trail

Clicking the interaction will show you the whole email conversation and details about duration, wrap-up code used etc.

Step 14

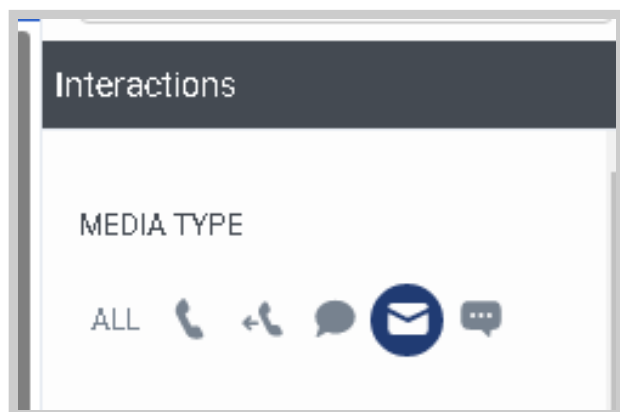

Solution

Parent step: 1

How to search for an interaction

In Genesys, we are only able to search for the already handled email interactions and not the new ones.

1. Go to Performance Interactions.
2. Select only mail interactions:

3. Enter the date you want to search for (in some cases if you narrow the search down to one day, no results

are shown so try to search by using the whole month):

PRESETS

Current interval

SKILLS

Search for skills

🔍

Order ID search:

5. Copy and paste the conversation ID in the conversation ID field or the order number in the external tag filter.

Important:

a) The conversation ID can be found in the previous register errand in this format:

<https://apps.mypurecloud.de/directory/#/engage/admin/interactions/30770ca9-506d-43cb-a047-f0ad27739b23>.

To be able to search we **only** need the text after the last / ---> 30770ca9-506d-43cb-a047-f0ad27739b23

b) Searching for the order ID may result in retrieving an open/unhandled interaction but no action (reply/disconnect) is possible in this case.

6. Press Enter to search.

Step 15

Solution

Parent step: 1

Closing an interaction without replying

To close an email that doesn't need a reply, click Disconnect.

Clicking Disconnect closes the interaction permanently. The interaction can be searched for and read, but can't be reopened.

While handling the email interaction always remember to check the communication dashboard in Edvin and close any dupe/already handled emails.

Step 16

Solution

Parent step: 1

What to do when the email request is not clear

The following process should be used in cases where we receive an **email** and the request is not clear, or we do not have enough information.

NOTE: In such cases, we should **always** first attempt to **contact the customer by phone**.

If we cannot reach the customer by phone, then we should reply to the customer's email with the email template: *"More info required from customer ##"* which is available in all requesting further information.

Is the code of the Language (e.g. More info required from customer UK for English)+

- Agents will make the attempt to contact the customer and try to assist in EN. If the passenger can communicate then the case can be finalized in that step.
- If the client can not understand EN, then the agents must send a fixed template (1 per scenario) with the request to the passenger to contact us via phone instead.

After sending this email, the following errand needs to be registered:

Channel	2: Mail In
Category	46: No information provided
Type	1: Customer not reached on phone
Action	1: Email sent

Step 17

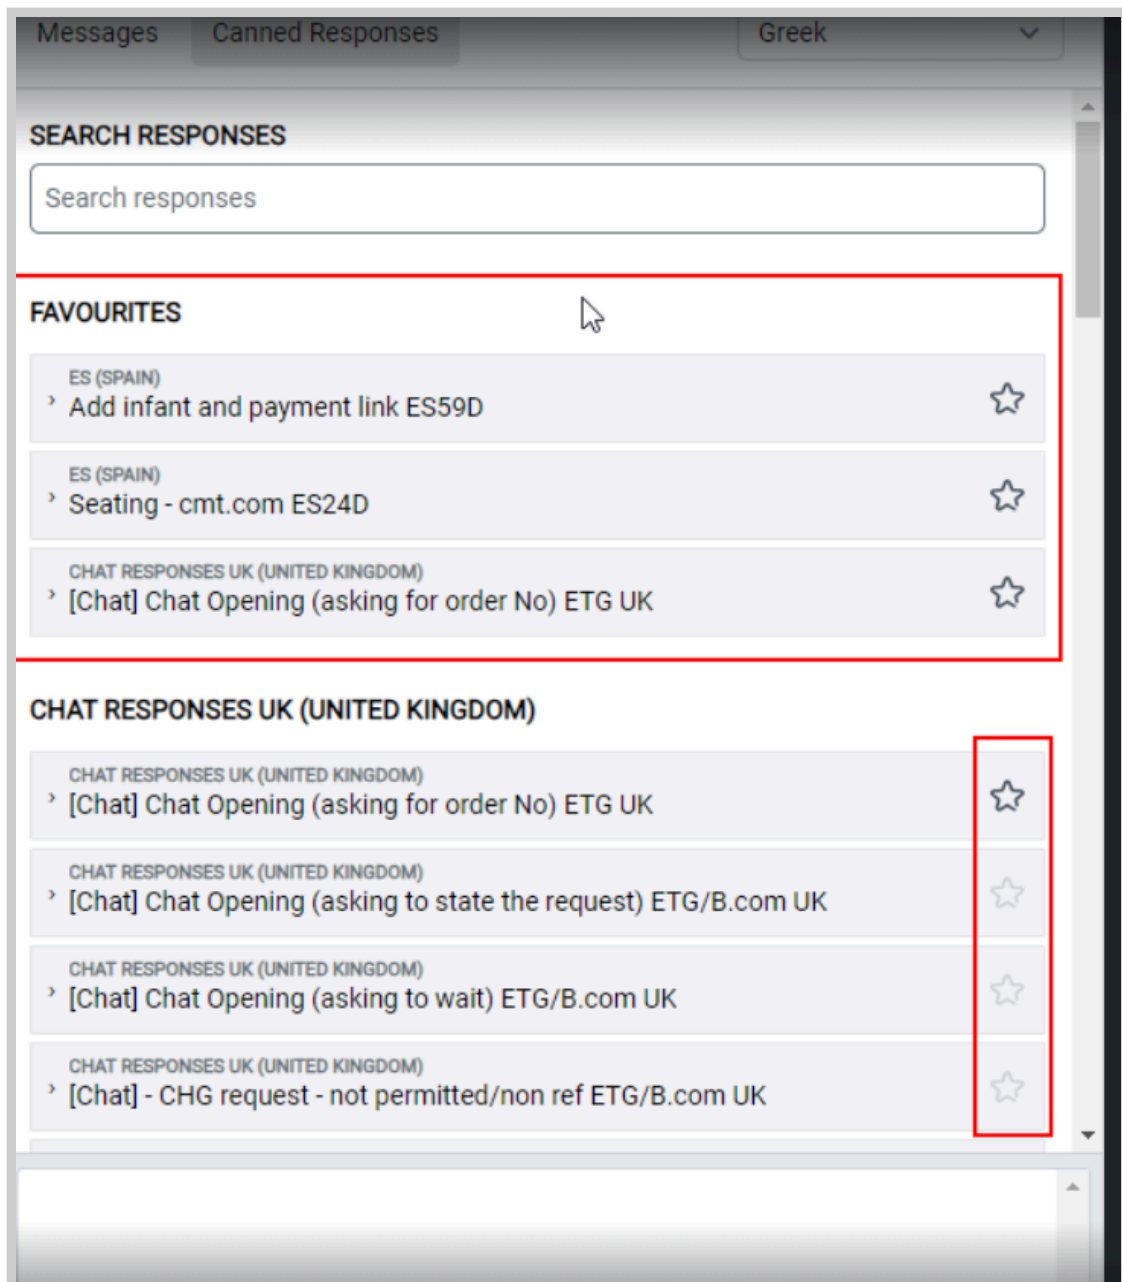

Solution

Parent step: 1

Favorite canned responses

Please note in Genesys we have the feature to save canned responses as favorites.

To add a canned response to the favorites, click the star on the right side of the canned response name. The favorite canned responses will appear at the top of the list as shown below:

Step 18

Solution

Parent step: 1

Email translation widget

- For emails coming from English sites, the widget by default will not translate the text similar to chat messages.

This means that the customer's email will not be translated to English, and the text the agent types will not be translated, but just copied to the clipboard:

Messages Canned Responses **No Translation** ▼

Re: Rebooking

› Samuel Kling	Jag behöver boka om min biljett.	7:20 AM	Jun 8, 2023
› Test email	Vi har kontrollerat flygbolagets regl...	7:23 AM	Jun 8, 2023
~ Samuel Kling	Ok, tack men vad ska jag göra då? ...	7:24 AM	Jun 8, 2023

to test.etg@etraveligroup.mypurecloud.de

Ok, tack men vad ska jag göra då?

On Thu, 8 Jun 2023 at 07:23, Test email <test.etg@etraveligroup.mypurecloud.de> wrote:
Vi har kontrollerat flygbolagets regler angående ombokning. Tyvärr tillåter inte flygbolaget någon ändring av denna biljett.

Email will not be translated and neither will the text you copy to clipboard

Copy to clipboard

The agent can choose a language to translate to, in the language dropdown menu. This **WILL** translate the customer's email to English, and the text the agent types will be translated to the selected language and copied to the clipboard.

- For emails coming from non-English sites, the system by default will translate it to the appropriate language.

This means the customer's email **WILL** be translated into English, and the text the agent types will be translated into the selected language and copied to the clipboard.

For the below example, the selected language is Greek, emails will be translated to English and the translate and copy to clipboard button will translate the message to Greek.

The email widget cannot send emails, it just copies the text to a clipboard so that the agent can paste it into the Genesys email reply:

Messages

Canned Responses

Greek
