- 6. ? Queues
- 7. ? Disconnect Reasons
- 8. ? Edvin
- 9. ? Time Shown in Genesys Cloud
- 10. ? Other
- 11. ? Transfer Call
- 12. ? Mute Call

Step 1 - Starting point

Question

No linked steps

How to setup an account in Genesys - instructions [here](#).

Question	
1. Logging In	Step 5
2. Select Phone	Step 4
3. Open in Edvin	Step 8
4. Mute Call	Step 12
5. Transfer Call	Step 11
6. End Call	Step 3
7. Queues	Step 6
8. Other	Step 10

Step 2

 Solution

Parent step: 1

Emails

1. Do we need to add a conversation ID to the errand note? Where to find and how to copy a conversation ID?

The conversation id should be always included in the register errand when you handle an email interaction. Below you may find how to copy the conversation id **when the email is still open**:

**2. Can we search for an email?**

We can only search for closed email interactions and not new ones. The only way to search is by having the conversation id. More info about how to search can be found [here](#).

3. How to send a new email from Genesys?

There is no possibility of sending a new email from Genesys. We are handling email threads in Genesys, and some departments such as SC agents are using either ETrack or Edvin for the First email sendouts. Responses will enter Genesys and be handled from there.

4. Where to find templates?

In Genesys, we have Canned responses. They are available only in case an interaction is open.

5. When transferring a case, could we add a note for the other department, by clicking on a note symbol?

No need to do so, just register an errand by always including the conversation ID.

6. What should be done when the email interaction is already handled?

Register errand under:

21: Already Handled/Incorrect Department

39: Already Handled/Incorrect Department

1: Already Handled

1: Mail In

7. Do we use Genesys for urgent refund requests to BO?

No, the urgent refund requests are sent to BO either by using labels or by Etrack as per our already set processes. More information can be found here-- Section 12.

8. How to escalate a case to the TL?

The email cannot be forwarded to the TL. The agent needs to:

- Reply that the request has been forwarded.
- Register Errand by always including the conversation ID while the interaction is still open.
- Proceed as per our already set processes.

9. How to add an attachment via the new contact form?

The customer is not able to add an attachment via our new contact form. The agent needs to reply to the email interaction and ask the customer to attach any document needed.

If the case concerns GDPR docs that should be handled by CR or BO then redirect to:

<https://www.etraveligroup.com/medcert/>

10. Which tool to use when we need to contact the airline?

Always Etrack.

11. How to handle cases that need to be placed on support?

Place Order on the respective queue in Edvin as usual and send a template to the passenger that the Support team will get back. Always include conversation ID in the Errand.

12. Do we offer rebooking via email? If yes, in which case?

We offer rebooking via email only for FM/SC cases.

13. Do we send payment links from Edvin or Genesys?

While on call Edvin.

While on email Rebooking PL needs to be copy-pasted in Genesys.

14. How to handle an infant adding requests received by email in Genesys?

As per the normal routine "Add infant - Amadeus & Sabre".

15. How to handle a case where a customer is asking for a refund, do we cancel it straight away or reconfirm the cancellation? (In the old contact form there was a tick for customers "Cancel anyway").

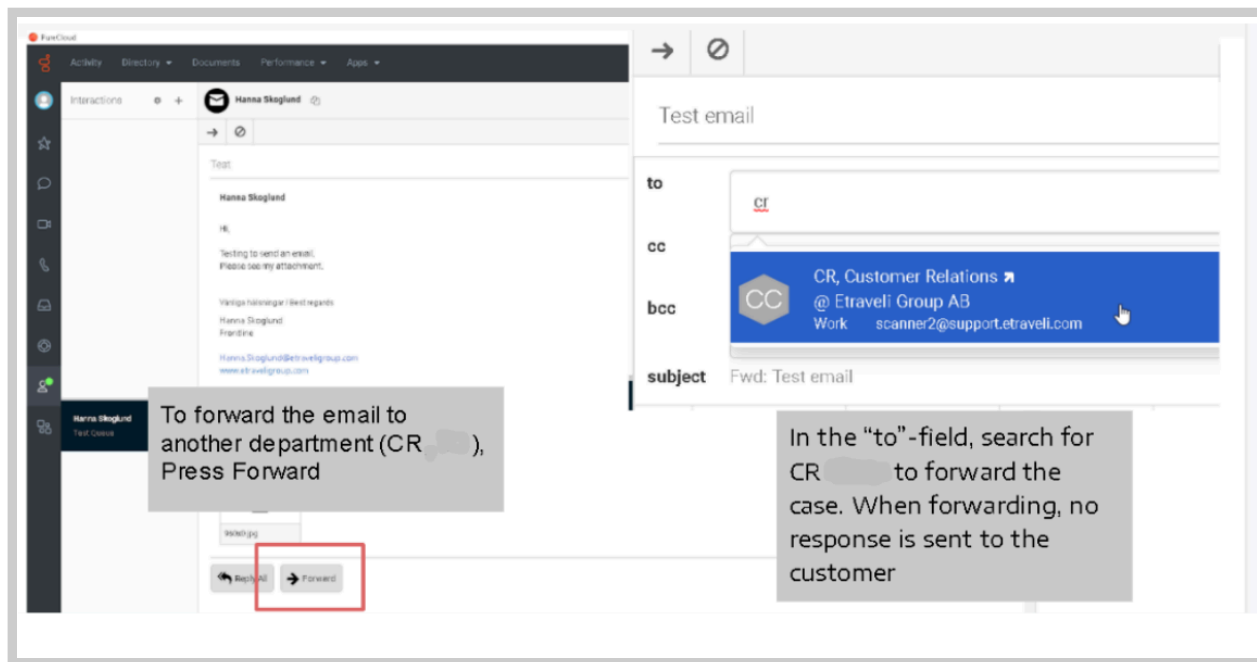

If the customer clearly requests cancellation and a full refund is granted then proceed with the Modify order without waiting for the customer's consent, register Errand, disconnect the interaction, and send conf of cxl through Edvin. If the cancellation can be done against a fee then always ask for the customer's consent.

16. How to handle urgent SC cases that need to be transferred to the SC department?

Transfer the email interaction to the correct SC queue in Genesys and the system will prioritize the departure date.

17. How to move an email interaction to CR?

Forward the email interaction as shown below:

18. How to handle cases that are already on support?

Reply to the customer that the case is already forwarded to the designated team and we will get back when we have updates.

19. In cases where the customer cc's ETG Managers to the email thread. Should we reply to all?

No, reply only to the customer and remove the other email addresses from cc.

20. What to do in case a customer asks via email to call him/her as cannot reach or has no access to email?

We always try to maintain the same communication channel as the original interaction we have received. We do not call the customer except in the below situations: [LINK](#) , [LINK](#) . We advise the passenger to call us, we have 24 24-hour customer service line. If the customer cannot call us or send an email due to other restrictions, the passenger can still provide the order/booking code to another person who can contact us for further assistance and proceed with security verification.

FAQ'S pertaining to SC Handling can be found below:

1. How to send back to FL an incorrectly transferred interaction that is not regarding SC? Click "blind transfer" and select the correct market. Ex. if this is a German customer you have to transfer the interaction to the German queue in Genesys and the interaction will end up in the correct FL market queue.

2. Do we create a new email conversation with YY/consolidator/pap from Genesys?

No. We still do this from Etrack, not possible to send fresh new emails from Genesys yet. You can also send emails to the customer from Edvin, but in such cases keep in mind that the customer will not be able to answer the email sent from Edvin.

3. When the agents are reissuing or refunding the booking is there a need to add a case note in the email interaction?

No, there is no need to add a note when closing (disconnecting) an interaction in Genesys at the moment. Always register clear errands in Edvin and include the conversation ID.

4. How do we transfer cases to WNS SC that are not handled by the MUM SC team?

Click "blind transfer" and select the queue: WNS Schedule Change queue.

Step 3

Solution

Parent step: 1

End Call

1. Is the agent supposed to end the call? Or must it be done by the customer?

Both the agent and customer can end a call.

2. Can we get a screenshot of where to enter wrap-up codes?

Yes, please refer to '[Pure Cloud - Phone](#)' article in Shelf

3. Will the agent get a new call as soon as the wrap-up code is submitted?

Yes, if there are calls in the queue.

Step 4

Solution

Parent step: 1

Select Phone

1. In Select In phone what options do we see, and which ones to select?

<YourName>WebRTC should be used.

2. Do agents have access to deselect the queues as per their choice?

No, agents can't select or deselect queues. This can only be done by a TL or Manager.

3. Do TL's/WFM have access to assign the queues to the agents?

Yes, TL's/WFM can assign, activate and deactivate agent's queues.

4. Can we get some screenshots to see how the queues look and how to deselect?

This can be found in '[Genesys call statistics and settings](#)' article in Shelf.

Step 5

Solution

Parent step: 1

Log in/Out

Please refer to '[Pure Cloud - Phone](#)' article in Shelf.

Step 6

Solution

Parent step: 1

Queues

Please note that outbound calls should be done on behalf of a queue, so customers can call back to ETG customer service.

1. Will the agent use off queue during the call when he wants to go on a break after that call?

Change status to Break, it will get the agent off the Queue automatically.

2. Can the agent punch his break during the call? Will the break time start from the time when he punched his break?

WFM to advise.

3. How are the breaks defined? Is it time-bound?

No, breaks are not time-bound, agents should follow WFM provided schedules.

4. If an agent is working on BO/Queues/emails - which option should he select to work?

Busy.

5. If an agent goes off the queue and does not punch any break, what impact does it have?

Adherence will be impacted.

Step 7

Solution

Parent step: 1

Disconnect Reasons

Disconnect reason	Description
Client	The Genesys Cloud user interface caused the disconnect. For example, an agent clicked End Call during a voice interaction or discarded an email interaction .
Conference Transfer	The Genesys Cloud user transferred the conversation to a conference.
Consult Transfer	The Genesys Cloud user started a consult transfer.
Endpoint	The segment caused the disconnect. For example, the user hung up their physical phone or the browser closed while using the Genesys Cloud WebRTC phone.
Error	An error in the provider caused the disconnect.
Forward Transfer	A transfer to forward the call caused the disconnect.
No Answer Transfer	A transfer after an alerting timeout caused the disconnect.
Not Available Transfer	A transfer due to a not available status caused the disconnect.
Other	A segment disconnected for reasons not covered by the other categories.
Peer	Another participant in the conversation caused the disconnect. For example, the customer hung up.
Spam	AWS spam filtering marked an email interaction as spam, and Genesys Cloud disconnected that interaction.
System	The cloud or the provider caused the disconnect.
Timeout	A system (dialing) timeout caused the disconnect.
Transfer	A transfer caused the disconnect.
Transport Failure	An ICE failure caused the disconnect.

Step 8

Solution

Parent step: 1

Edvin

1. Will the customer be able to punch in the Order/PNR through the IVR?

This is not required as Edvin is integrated with Genesys, and can recognize if the customer is calling from the number provided in the booking.

2. Once we click 'Open in Edvin', will it open the order there or it still asks for the Order number?

It will open the order but agents are still to ask for the Order number for verification purposes.

3. Will Edvin open in the same window?

No, in a separate window.

Step 9

Solution

Parent step: 1

Time Shown in Genesys Cloud

The time shown is always the user's local time both for phone and email interactions.

Step 10

Solution

Parent step: 1

Other

1. Will the agent have access to out call?

Yes

2. Is there a plan to have the Email ID the same way as we have in Etrack so that anyone can locate the email and its thread?

There are Conversation ID that the agent can copy, insert in Edvin Errand and track by it the e-mail from the customer. **How should it be used?**

Every conversation gets their unique ID, that could be used.

3. Will TLs have access to see the Email queue volume to have a picture of the emails waiting to be handled and the general backlog?

Calls and emails are housed in the same queue. TL's, managers and agents can all see the waiting emails just like we do for phones.

4. How can the agent determine that we have lost the deadline to reply to the customer? There is a timer on how long the case has been on a Queue, but no information on whether we reply late or not, as we have in Etrack with the column Next Action Due and its colors (where RED means we need to apologize to the customer).

New process to be set.

5. Metasearchers escalations will be still handled via Etrack?

Yes.

6. When the timer of 5 min expires before we Answer/Decline the mail, what will happen to the e-mail? Will we receive a new transaction?

The email is routed to the next available agent. The agent who originally was routed the email will automatically be placed in a "not responding" state and needs to manually exit this state to receive new interactions.

7. What if a call from a customer should be forwarded by one agent to another who is currently working on mail? Is that possible technically?

If you transfer a call directly to an agent they will be prompted by the phone call even if they have a running call or email. However, an agent will not be handed a call from a queue if they are already working on an interaction.

8. Will we be able, for example, Support Agent, to create a new e-mail in Genesys to send it to the customer or they will need to do so from Etrack?

Support tasks are kept in Etrack for the time being.

9. **Can we send a reminder to a customer who does not reply to us and has an urgent case? For example, a customer contacted us for cancellation, we sent him a reply indicating to reply in 24 hours. 22 hours have passed with no response, can I reopen the e-mail transaction to send a reminder?**
It's not possible to reopen the interaction without the customer answering. However, it's possible to start a new interaction.
10. **We tried to attach from the customer side a JPEG file, but it could not be opened in the Genesys pop-up window. Maybe there should be some things fixed or installed?**
Cannot reproduce it, so I tested attaching both images and other files without any issues.
11. **When the agent transferred an e-mail to another department(like CR or SC) will it be counted in his productivity?**
Yes, it will count as a received+handled interaction just like it does for calls.
12. **there is some setting in Genesys Agent Profile where we can insert our name and it will be stored whenever we select the Brand canned response and the alias name will be already there. I tried to find it but nothing.**
This is a task for TL's/managers to complete.
13. **Will Facebook or other Social Media be integrated into Genesys?**
Yes.

Step 11

Solution

Parent step: 1

Transfer Call

1. **Can we transfer the call to another user?**
Yes, if it's a Genesys user.
2. **Can an agent transfer the call to other language queues? For example, the customer wants to speak with a German agent.**
Yes, please refer to '[Pure Cloud - Phone](#)' article in Shelf.
3. **Can I check if the call I received is a transferred call?**
Yes, please refer to '[Pure Cloud - Phone](#)' article in Shelf.
4. **Is the agent supposed to do a cold or warm transfer?**
Cold transfer. However, there is a feature for warm transfer as well.
5. **How do we get back to the caller in case it is taking time to get the call transferred?**
You will not be able to get the customer back if you have cold-transferred the call.
6. **Can we get a list of External contacts with a small explanation?**
External contacts are not used in the phone routines.
7. **Do we have the functionality to conference a call? Example; customer and airline.**
As per the process, this is not required, but it is possible to conference.
8. **Will the hold functionality be disabled?**
No.

Mute Call

1. **Will there be functionality in Genesys to mute the call?**
Yes, please refer to '[Pure Cloud - Phone](#)' article in Shelf.
