Step 1 - Starting point

Question

No linked steps

Passengers at the airport

Here you can find all the guidelines on what to check when a passenger contacts us when they are at the airport.

The main scope here is to understand if there is a mishandling/technical error from our side that caused issues for the passenger at the airport and if there is accountability to assist the passenger.

The SLA for the resolution of the case should be 1 hour.

3. Outsourcing Step 13

FL agents

In case you receive an incoming interaction from a passenger stating that they face a problem at the airport, make sure to follow the next steps in order to check if there is any pending case, mishandling, or technical issue from our company that could cause the issue.

Guidelines

1. Check if the order is still unresolved in a queue:
 - If yes, check for which request it was added to the queue and if it has been resolved without removing it from the queue. If it is still unresolved, contact your TL to inform them about the case and either handle it on the spot together or send the case to Support according to the TL's decision.
 - If the case is not in any queue, proceed to the next step.
2. Follow all the steps described below based on the type of the booking system.

> GDS orders

- Make sure that the passengers have the correct ticket numbers and the airline locator. Always provide the customer with the latest ticket numbers and the locators of the airline. If there are multiple airlines involved, all tickets/locators should be given in written to avoid further confusion. You can find them in TD in Edvin or in the GDS with the commands mentioned [here](#).
- Check on which airline's stock the ticket is issued and guide the customer accordingly to the same carrier. You can understand that by decoding the first 3 digits of the ticket number with the commands mentioned [here](#) or in Edvin under the segment "Air Bookings" in the column "Tk".
- Always compare the coupons of the tickets with the itinerary in order to verify whether the coupons correspond to the itinerary in the GDS.
- Check the history of the PNR for schedule changes and alterations and if the customer has been informed in time about them.
- Check if all the tickets (for all the passengers) can be found in the same PNR or if a locator is missing.
- Compare also the name and surname in the PNR with the name and surname on the tickets. In case there was previously a NACO/NACH request of the customer, check if the name has been corrected according to the customer's.
- Check the OSIs, SSRs and the remarks in the PNR to validate if any notification was added by the airline.

> NDC orders

- Make sure that the passengers have the correct ticket numbers and the airline locator. Always provide the customer with the latest ticket numbers and the locators of the airline. If there are multiple airlines involved, all tickets/locators should be given in written to avoid further confusion. You can find them in TD in Edvin or in the respective portal.
- If applicable: Always compare the coupons of the tickets with the itinerary in order to verify whether the coupons correspond to the itinerary.
- Check in the portal for any SC and if the customer has been informed on time about them. If applicable, you can also check OTRS for this matter.
- Check if all the tickets (for all the passengers) can be found in the same PNR or if a locator is missing.
- Compare also the name and surname in the PNR with the name and surname on the tickets. In case there was previously a NACO/NACH request of the customer, check if the name has been corrected according to the customer's.
- If applicable: Check the OSIs, SSRs and the remarks in the PNR to validate if any notification was added by the airline.
- If applicable: Check the Van:S tab or/and the TfPay tab in Edvin to see if the payment to the airline has been successful or not. If the "Settled amount" under the "Payment data" is 0.00EUR or the last "Transaction type" in the "Virtual Card Transaction" is NOT "Authorization" Or Capture/Settlement of a previous Authorization", then there is probably something wrong with the payment to the airline:

Payment data				
Authorizations and settlement				
Expected charge amount	Authorized amount	Auth failure code	Settled amount	Refunded amount
524.83 EUR	0.00 EUR		0.00 EUR	

> LCC orders

- Make sure that the passengers have the correct airline locator and the ticket numbers (if there are any). If there are multiple airlines involved, all tickets/locators should be given in writing to avoid further confusion. You can find them in the TD in Edvin or in the confirmation email of the airline in the OTRS in Edvin.
- Check the OTRS in Edvin for any email from the airline regarding a change in the booking and if we have informed the customer on time about it:
 - Check the status of booking on the website of the airline (if possible) or/and in the booking system (Tripstack or Travelfusion)
 - Check the Van:S tab or/and the TfPay tab in Edvin to see if the payment to the airline has been successful or not. If the "Settled amount" under the "Payment data" is 0.00EUR or the last "Transaction type" in the "Virtual Card Transaction" is NOT "Authorization" Or

Capture/Settlement of a previous Authorization", then there is probably something wrong with the payment to the airline:

Payment data				
Authorizations and settlement				
Expected charge amount	Authorized amount	Auth failure code	Settled amount	Refunded amount
524.83 EUR	0.00 EUR		0.00 EUR	

3. Based on the aforementioned investigation:

- If you come to the conclusion that **there is a mishandling or technical error, or there is the need for call listening to determine that, inform your TL urgently about it.** Your TL will then decide if the case can be handled on the spot with his guidance or if you should send the case to Support for further handling.

ATTENTION

It is important to involve your TL at this point, so do not miss to do so.

- In case the TL advises you to send the case to Support, make sure to confirm the phone number of the passenger with them and inform them that they will be contacted by phone for any update.
- When sending the case to Support, choose the Autofill handling deadline "Passenger at the airport".
- If there is no mistake of the company affecting the booking of the customer and the issue that the passenger is facing is a result of:
 - A last-minute SC or an FM situation, assist the customer according to the respective processes and deadlines.
 - For VI orders, check if the connection guarantee applies and transfer the interaction to the respective queue.
 - The passenger's delay in check-in or boarding, assist them as per the policy of the airline and the fare rules.
 - The passenger does not have the needed documents - advise them that as per our terms and conditions, the travel agency is not responsible for the documents the passengers need to have for their flight and that they always need to check this with their embassy before the travel.

Step 6

Solution

[Parent step: 2](#)

SC agents

In case you receive an incoming interaction from a passenger stating that they face a problem at the airport, make sure to follow the next steps in order to check if there is any unhandled or mishandled schedule change, affecting their flight/s.

Guidelines

1. Check if the order is still unresolved in a SC queue:
 - If yes, check if it has been resolved without removing it from the queue. If it is still unhandled, contact your TL to inform them about the case and either handle it on the spot together if possible or send the case to Support according to the TL's decision.
 - If the case is not in any queue, proceed to the next step
2. Check in Edvin errands if there is any email.
3. Follow all the steps described below based on the type of the booking system.

➤ **GDS orders**

- Check the status of the segments to see if they are confirmed or not.
- Always compare the coupons of the tickets with the itinerary in order to verify whether the coupons correspond to the itinerary in the GDS.
- Check the history of the PNR for schedule changes and alterations. Check when they occurred and if the customer has been informed about them on time.
- Check if all the tickets (for all the passengers) can be found in the same PNR or if a locator is missing.
- Check the OSIs, SSRs and the remarks in the PNR to validate if any notification was added by the airline.

➤ **NDC orders**

- Check the status of the segments or of the booking in general (depending on the portal) to see if they are confirmed or not. If applicable, you can also check OTRS for this matter. Check when they occurred and if the customer has been informed about them on time.
- (If applicable) Always compare the coupons of the tickets with the itinerary in order to verify whether the coupons correspond to the itinerary.
- Check if all the tickets (for all the passengers) can be found in the same PNR or if a locator is missing.
- (If applicable) Check the OSIs, SSRs and the remarks in the PNR to validate if any notification was added by the airline.

➤ **LCC orders**

- Check the OTRS in Edvin for any email from the airline regarding a change in the booking and if we have informed the customer on time about it.

- Check the status of the booking on the website of the airline (if possible) or/and in the booking system (Tripstack or Travelfusion)

Based on the aforementioned investigation:

- If you come to the conclusion that **there is a mishandling or technical error or there is the need for call listening to determine that**, inform your TL/coordinator urgently about it via the dedicated slack rooms (#sc-etg-privategroup for IN and #sc-ath-coordinator for ATH).

ATTENTION

It is important to involve your TL at this point, so do not miss to do so.

- **For ATH SC agents:** Select in the slack room's workflow the reason "Passenger at the airport" for these cases. Your TL/coordinator will then take over the case.
- **For BOM/PNQ SC agents:** Write necessarily in your comment "**Pax at the airport**" so that the case will be handled with priority.
- If there is no mistake of the company related to SC affecting the booking of the customer and the issue that the passenger is facing is a result of:
 - A last-minute SC, assist the customer according to the existing processes and deadlines
 - for VI orders, check if the connection guarantee applies and transfer the interaction to the respective queue (Check the [queues for voice/chat/email transfers](#)).
 - A mishandling by FL (if you could recognize it during your investigation), contact your TL to send the case directly to FL Support (As handling deadline - select the Autofill: "Passenger at the airport").
 - any other reason, transfer the case to the FL queue (Check the [queues for voice/chat/email transfers](#)).

Step 7

Question

Parent step: 1

Support agent's actions

The Support Agent should make sure to handle the case with efficiency and urgency and keep the customer updated.

If any help is needed, you should urgently consult the TL involved.

New Question

1. FL Support agents

Step 3

Step 8

 Question

Parent step: 3

Inhouse FL Support agents

Step-by-step guidelines for the FL Support agents

1. Investigate the case to confirm that there is indeed a mishandling/technical error.
2. Contact the passengers to let them know that their case is in progress.
3. Check the history of the booking for any minor or major SC that we can exploit.
 - If there is any, contact the airline for assistance. Explore all options with the airline, both rebooking and refund.
4. Contact the airline to check for any exceptions/waivers or the possibility to reinstate the segments/ revalidate the tickets, if applicable.
5. Raise the RL Jira and assign it to you (for ATH/UPA) or to your TL (for IN in-house) following the guidelines in [Retail loss recovery](#) for your location. Do not forget to select the answer **Yes** in **Customer at the airport** field while raising the RL Jira.

Retail loss recovery (for retail losses of 200 EUR and higher)

- Contact the passengers to let them know that their case is in progress.
- Check the history of the booking for any minor or major SC that we can exploit:
 - If there is any, contact the airline for assistance. Explore all options with the airline, both rebooking and refund.

If a Support agent has previously contacted the airline for this scenario, move to the next steps.

- Contact the airline to check for any exceptions/waivers or the possibility to reinstate the segments/ revalidate the tickets, if applicable.

If a Support agent has previously contacted the airline for this scenario, move to the next steps.

- Check for all the possible alternatives we can propose to the customer:
 - Check if there is still the possibility to rebook the tickets:
 - For the next available flight and calculate the retail loss
 - For a next day flight and calculate the retail loss
- Check the option to cancel the original order against the fare rules (if no other exception applies) and calculate the cost of a new ticket in the scenarios mentioned below.

TIP: You can search at this point on one of the websites (Gotogate, Mytrip, Flightnetwork) in order to find all possible flight combinations for this route. You should **BE CAREFUL** though, as this is **only for advisory purposes**.

No new booking should be made on our website. Once you find the best combination, the booking should be made on a GDS/portal or on the website of the airline, if it is an LCC.

- For the next available flight with any airline and calculate the retail loss.
- For a next day flight and calculate the retail loss.
- For the options that include a next day flight, calculate additionally the accommodation cost according to the guidelines under " Price range for hotel accommodation " at the end of this page or in this [link](#).
 - Add the upper threshold of the price range selected for the hotel booking to the cost of the flight booking for the next day.
- Evaluate together with the involved TL or your Manager, which of the options mentioned above is the best to offer to passenger taking into consideration both the customer's and the company's interest.
- Call the customer to propose this option. Ensure that the customer is updated if there is any change in the transit city since additional Visa requirements might apply or specific documents might be needed.
 - If they confirm, proceed to step 8.
 - If they do not confirm this option, provide them with one of the other applicable options, you have previously checked.
- Do not forget to mention the final solution (confirmed by the customer) in the RL Jira that has been raised and finalize the recovery. If a hotel booking is included in this solution, do not forget to mention the price range clearly in your comment.

ATTENTION

Regarding the hotel price range, this should be considered in terms of total retail loss, when deciding what is the best alternative for the customer and the company.

However, the RL Jira and the reason code should include only the cost of the flights (+any purchased ancillaries).

The cost of the hotel booking will be approved by the CR team once the customer sends it in the receipt.

Actions after the retail loss recovery and the approval of the TL

1. The assigned Support agent should proceed with the necessary actions according to the TLs comment in the RL Jira and the option confirmed by the customer during the recovery.
2. If needed, send the case to ticketing urgently depending on the time of the departure of the next flight and the policy of the airline regarding the rebooking. **If needed, the TL can additionally escalate the case to Ticketing via the respective Slack channel.**
3. Send an email with the new itinerary to the customer. In case a hotel booking is included in the alternative proposed to the passengers, set additionally the expectation of the cost of it in writing, by informing them about the price range for the hotel booking calculated at the previous step, in order to book it themselves. Use for this reason the templates:
 - *"Rebooking conf. +Accommodation price"* for ETG orders
 - *"Booking.com- Rebooking conf. +Accommodation price"* for Booking.com orders

Be aware that the price range in the email that will be sent to the customer, should be provided in the customer's currency, so convert it to the market's currency.

Important:

- You should maintain constant contact with the customer if the resolution takes longer than expected so that the customer does not end up making their own arrangements at the airport at his own expense without any regard to the cost which will inevitably become our loss to absorb.
- Helpful questions to have in mind for the retail loss recovery stage:
 - Can the original flight be reinstated?
 - Have we called the airline/supplier and checked for possible waiver/authorization to reinstate or get a full refund?
 - Have we checked if possible to find cheaper flights +/- 1-2 days?
 - Have we checked for LCC flights as well (if applicable) ?
 - Have we compared RL rebooking of original reservation VS new ticket sell?

New Question

1. Price range for hotel accommodation

Step 10

Step 9

Solution

Parent step: 3

Outsourcing Support agents

For OUT Support locations since the TL/Manager should be involved as soon as possible by the FL phone/chat agent.

If the case ends up in a Support queue of an outsourcing location though, you should have in mind that the case needs to be handled with **urgency**.

The steps you need to follow are mentioned below.

Step-by-step guidelines for the FL Support agents located in CNX or WNS

1. Investigate the case to confirm that there is indeed a mishandling/technical error
2. If the loss is inevitable, contact your TL/Manager urgently for them to take over the case and handle it further
3. Contact the passengers to let them know that their case is in progress

Step 10

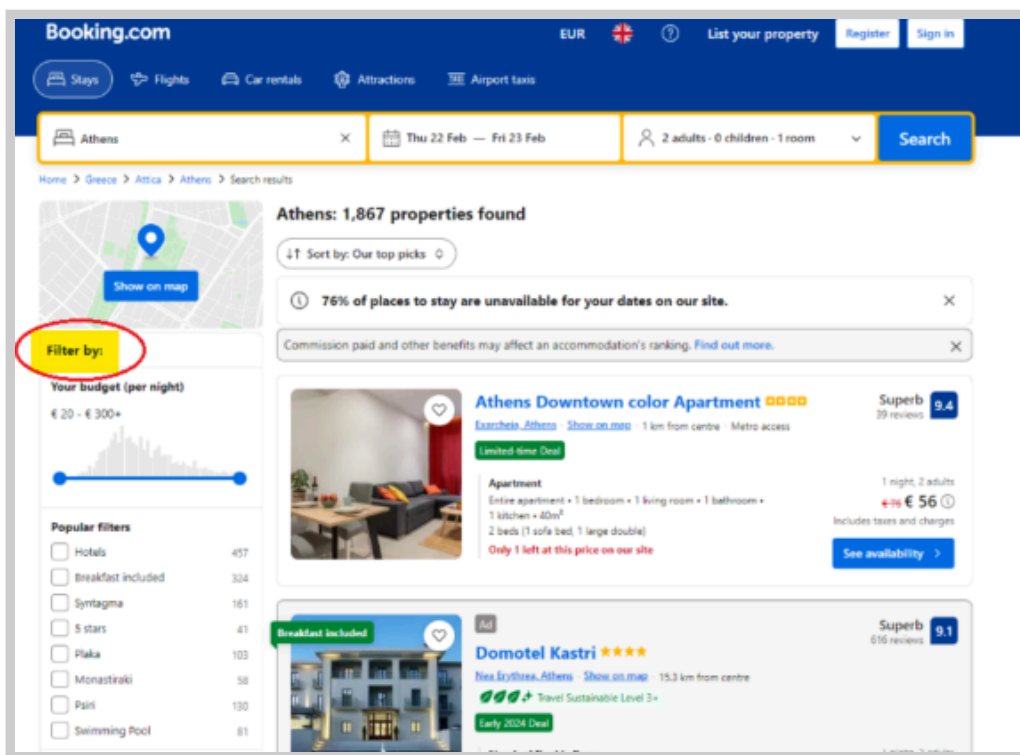

Solution

Parent step: 8

Price range for hotel accommodation

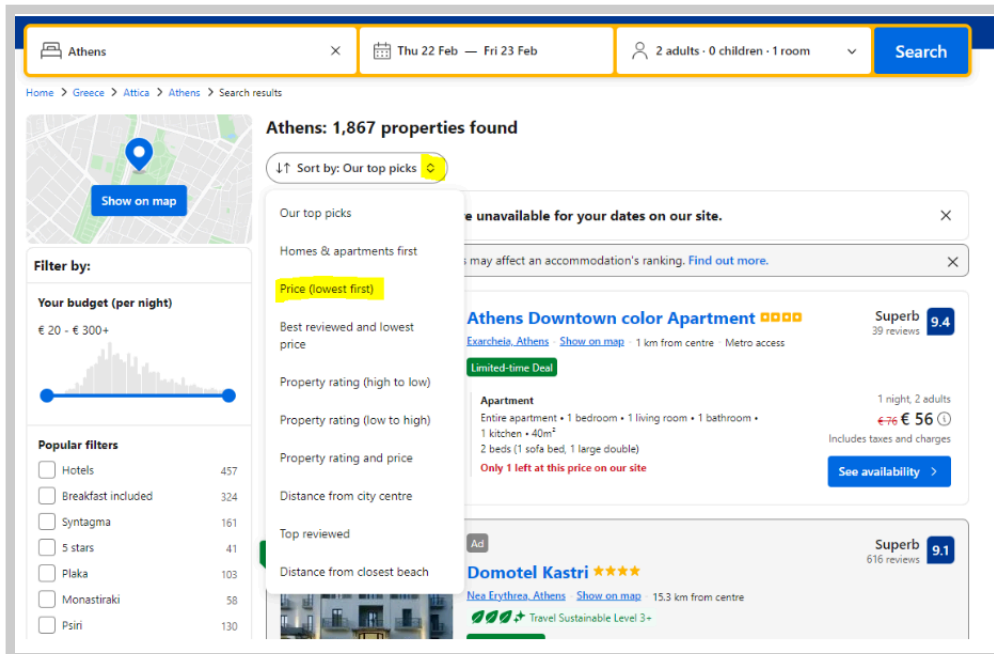

To check the price range of a hotel booking and find out if it is beneficial for us to book a flight on the next day for the customer. The Support agent needs to follow the steps below:

1. Visit the [Booking.com website](https://www.booking.com).
2. Select the city the customer is in (city of departure), the date and the number of passengers. Regarding the city, the agent needs to search for hotels close to the airport of the city, if possible.
3. On the left side of the screen, the agent can find the column "Filter by:" where all the filters can be found:

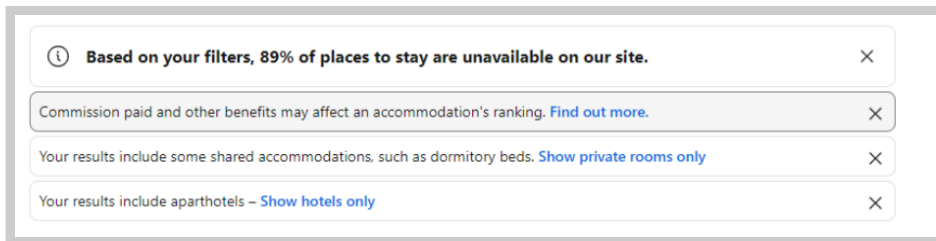

- Select the filters:
Property type: Hotels
Property rating : 3 stars
Review score : Good: 7+

4. The results need to be sorted by Price (lowest first). Click on the "Sort by:" option and select the option Price (lowest first), as highlighted in the screenshot below:

5. If you get the below messages at the top of the page, click on the blue phrases: “Show private rooms only” and “Show hotels only”:

6. Check the cost of the first 3-4 options shown and divide it by the number of passengers you have selected in step.

7. Check in which price range of the ones mentioned below is the cost of the 4 hotels included.

- **The price ranges are:**
 - Up to 75 EUR per passenger
 - 75-150 EUR per passenger
 - 150-225 EUR per passenger

Step 11

Solution

Parent step: 4

Athens SC Support agents

Process for SC Support Agents

The Support Agents should not be involved in "Passenger at the airport" cases since the SC phone/chat agent should escalate these cases to the coordinator via the Slack room #sc-ath-coordinator.

If the case mistakenly ends up in Support, please follow the guidelines for [SC phone/chat agents](#) in this decision tree.

Support agents from below markets PT, IT, ES, FR, DE, can be requested to call a customer by their TL, if the coordinator tries to call the customer in EN, but doesn't speak EN.

In this case, you will register SC Frontend finalized errand, and they will mention that they "called the customer on behalf of coordinator due to language barrier and pax confirmed to proceed with XXXX". Click [here](#) to check how to register the errand in Edvin correctly.

Step 12

Solution

Parent step: 4

SC Support agents in IN ETG

The Support Agents should not be involved in "Passenger at the airport" cases since the SC phone/chat agent should escalate these cases to the coordinator via the Slack room #sc-etg-privategroup.

If the case mistakenly ends up in Support, please follow the guidelines for [SC phone/chat agents](#) in this decision tree.

Step 13

Solution

Parent step: 4

Outsourcing

For OUT Support locations, since the TL/Manager should be involved as soon as possible by the SC phone/chat agent.

If the case ends up in a Support queue of an outsourcing location though, you should have in mind that the case needs to be handled with **urgency**.

The steps you need to follow are mentioned below.

Step-by-step guidelines for the SC Support agents in Outsourcing offices

1. Investigate the case to confirm that there is indeed a mishandling/technical error.
2. If the loss is inevitable, contact your TL/Manager urgently for them to take over the case and handle it further.
3. Contact the passengers to let them know that their case is in progress.

Step 14

Solution

Parent step: 1

Team Leader's/Coordinator's actions

The TL should be involved as soon as the error has been determined in order to avoid/minimize the loss and have the overview and supervision of the whole process until the resolution.

The TL needs to ensure that the case is handled with high critical thinking, taking into consideration the customer's and the company's interests.

Main responsibilities

- Assist the phone/chat agent in understanding if there is any mishandling/technical error from our side or not, if the agent cannot figure that out themselves.
- It is the TL's responsibility and ownership to ensure that the Support agent keeps the customer informed and updated at all times, even if we don't have a resolution the customer needs to be up to speed.
- Assist the Support agent in deciding what is the best option to propose to the customer considering both the customer's experience and the cost for the company.
- If a loss is inevitable, determine the loss value and follow the standard routines regarding loss approval.
- For very urgent cases (new departure is really close) escalate the case to ticketing via the respective Slack channel.

Helpful questions to have in mind for the retail loss recovery stage:

- Can the original flight be reinstated?
- Have we called the airline/supplier and checked for possible waiver/authorization to reinstate or get a full refund?
- Have we checked if possible to find cheaper flights +/- 1-2 days?
- Have we checked for LCC flights as well (if applicable)?
- Have we compared RL rebooking of original reservation VS new ticket sell?

Specific guidelines per type of case and location

FL

- **Outsourcing TLs/Managers:**
 - Avoid sending the case to Support.
 - Once you are informed about a possible mishandled case when the passengers are already at the airport, you need to check urgently the case and evaluate the loss. If you cannot authorize the retail loss according to the guidelines mentioned in [Retail loss recovery OUT](#), raise immediately an OUT Jira.
 - The above applies to technical errors as well.
- **TLs/Managers in India office:**
 - If you are involved in the case by the FL phone/chat agent, as you should be, and you estimate that the retail loss is over 200 EUR, avoid sending the case to Support for any action. Ask the FL phone agent to raise the RL Jira or raise it yourself and send IT urgently for recovery.
 - Ask for updates about the status by contacting the RLR agent or their Manager/TL
 - Once the recovery is finalized, approve it asap and assign the case to an agent for further handling
 - You should also monitor and act urgently if a case is sent to *#retail-loss-fl-sc-team* from SC TL or coordinator in case calculations as per fare rules are needed.

SC

- **Outsourcing TLs/Managers:**

- Avoid sending the case to Support.
- Once you are informed about a possible mishandled case when the passengers are already at the airport, you need to check urgently the case and evaluate the loss. If you cannot authorize the retail loss according to the guidelines mentioned in [Retail loss recovery OUT](#), raise immediately an OUT Jira.
- The above applies for technical errors as well.

TLs/coordinators in ATH:

- **Coordinators:**

1. Reply to Slack that the case is under investigation and start handling the case by raising an RL Jira in their name and handling it with top priority.
2. Check all the available alternatives as per the guidelines mentioned in this decision tree for the [Inhouse FL Support agents](#) under Retail Loss Recovery.
3. Keep the customer informed about any updates. In case you contact a customer in EN, and he does not speak the language, if those are from the below list (PT, IT, ES, FR, DE), you can request from the RL handling slack room assistance from TL to find an agent to contact the customer. Do not forget to mention that the customer is at the airport and the case needs urgent handling.
4. If there is a loss more than the amount that you can authorize, slack the TLs/coordinator's new slack room #ath-sc-retail-loss where TLs will have to monitor and reply on time. In case a TL is already involved in the case, tag them in the slack room or slack them directly in order to speed up the process.
5. Once the case is finalized, register an errand.

- **TLs:**

1. Check the slack room *#ath-sc-retail-loss* and authorize instantly cases sent by the involved coordinator that mention that the passenger is at the airport.

TLs/coordinators in India offices:

- Reply in Slack that this is under investigation and start handling the case by raising an RL Jira in your name and handling it with top priority.
- Take over the case end-to-end
- Keep the customer informed about any updates
- For calculations as per fare rules, the case will be redirected to the FL TLs via the Slack room: #retail-loss-fl-sc-team. Do not forget to mention there that the passenger is at the airport and the case is urgent.
- If there is a loss more than the amount that you can authorize, slack the TLs in the same Slack room, where TLs will have to monitor and reply on time.
- If assistance from the RLR team is needed, then the TL should contact the team for assistance.
- Once the case is finalized, register an errand.
