Step 5

Solution

Parent step: 2

Create Add on cart

*** **OBSERVE:** If there already is an *Add on cart* made for the same product and the same amount or lower by another agent; you may edit that cart instead of making a new one. ***

- Go to **Add on purchases** in Edvin in order to create a payment link by pressing **Create add on cart**.

For ancillary requests:

- Choose the correct product in **Add on Sales** tab - list of correct products can be found [here](#) under 1) Ancillaries and Services list
- Tick the correct Passenger
- Insert the relevant fee based on the type of the passenger, (Adult, Child, Infant).
 - You need to insert the GDS price multiplied by our markup, which applies for one passenger.
 - The amount has to be inserted in the customer's currency.

- Insert 0 in fields for passenger types that are not applicable for your request.
 - Write in the *Text to customer* brief description of the added product (how many pieces, kilos/dimensions and or number if applicable) and specify for which passengers it has been added. If the order has multiple PNRs, specify to which PNR the product was added.
4. Press the shopping cart icon to save the added charges.

Add on cart

Add on Sales
Our Service Fee
Airline Cost and other
Fallback
Other

Name	Our Fee	Provider Cost	Text to customer
<i>i</i> LCC ancillary (Manual)			No text added * <i>✎</i>

<i>i</i> Baggage Insurance (Manual)			No text added <i>✎</i>
<i>i</i> Baggage Service (Manual)			
<i>i</i> Baggage GDS (Manual)			
☒ <i>i</i> Ch...	25	0	1PC 23kg checked bag for outbound flight * <i>✎</i>
	0	0	

Select all

For rebooking requests:

1. Choose the correct product in *Airline Cost and other* tab
2. Tick the correct Passenger
3. Insert the relevant airline fee in *Provider Cost* box.
 - Write in the *Text to customer* brief description of the service (which flights, which dates, origin/destination) and specify for which passengers it has been added. If the order has multiple PNRs, specify to which PNR the service was added.
4. Press the shopping cart icon to save the added charges.

Activate payment link

MOTO Payment

Close

3) Ensure that you have added all the needed products and that the Total amount is relevant to the cost provided to the customer.

4) Choose relevant for of payment by clicking on the respective blue button

• **MOTO Payment:**

It is a preferred method of payment for all services/products and for collecting our handling fees.

MOTO should always be suggested as the first payment option wherever possible. (check MOTO Payment handling guidelines for more details and exceptions)

• **Payment link:**

Can be used as an alternative for the above requests if the customer can not fulfil the payment during the call or declines to process via MOTO.

Check Payment link handling guidelines for more details and applicable scenarios

Shall be used for schedule change cases, which can not be finalised by a phone agent (check schedule change handling guidelines for more details)

For guidelines on MOTO and Payment link follow next points in this decision tree.

Step 6

Solution

Parent step: 2

Edit existing Add on cart

*** **OBSERVE:** If there already is an *Add on cart* made for the same product and the same amount or lower by another agent; you should edit that cart instead of making a new one. ***

All created but not paid carts, are visible in "Add On Purchases" tab in Edvin:

Base Settings	My Links	Public	Payment Transactions	Consultation	Refunding	Communication	Refund	Product Pricing	Fixed Rates	Training	Event and Log	2 Documents	Add as purchase 1	Send SMS	Manage WHO ID	Show All
Departure is in the past: 2019-09-19

3. The cart will open and will include the initial products.
4. Double check if the cart includes the products that customer wishes to purchase and choose the relevant payment method to fulfill the charges as per standard routines.

You can also **Cancel cart** and then **Remove cart** if it's not needed at all anymore.

Solution

Parent step: 3

Step 7

What is a MOTO Payment and when to use?

What is MOTO Payment

A direct payment form, which allows the customer to pay the additional charges via a secure IVR payment flow, during the phone call handled via Genesys.

The agent is not handling any sensitive data, all the card details are inserted by the customer during the IVR payment flow.

The outcome of the payment is shown to the agent in real-time.

When to use MOTO Payment

MOTO is a preferred method of payment for all products and services as well as for collecting our handling fees. MOTO should always be suggested as the first payment option during phone interactions unless it is not technically supported. (The MOTO Payment button will not be available in Edvin when creating an Add on cart for orders, where the MOTO form of payment is not technically supported).

Note1: MOTO Payment is **NOT supported** for **LATAM markets**. It will not be available as a payment option in the Add on cart in Edvin for these markets.

Note 2: All cards are supported for payments via MOTO, except Maestro cards, which will NOT be accepted on AU on the CA market.

Note 3: that MOTO payment will not be technically possible when active monitoring is in place (such as Supervisor monitoring or other agent shadowing).

Booking.com orders are no longer excluded from the MOTO Payment option. For markets, where MOTO is enabled, you shall always first suggest MOTO Payment as available payment method also on Booking.com orders.

ATTENTION

Never send the customer to secure payment flow via Genesys, if MOTO Payment is not available as an option in *Add on cart*! Genesys is not able to differentiate the markets, for which MOTO payment is not supported.

Of course, for all requests, if the customer is not able to fulfill the payment on the spot, during the initial phone call or denies processing via MOTO, you may still offer a Payment link as per standard routines.

ATTENTION

Whenever you offer a Payment link, you shall state in your errand the reason why you could not use MOTO (i.e, pax denied MOTO, MOTO not enabled etc.).

Support agents should also use the MOTO Payment as a preferred method of fulfilling the charges during their outgoing phone interactions.

For details on **how to make an outbound call**, please refer to the relevant section [here](#). Please note that the option to send the customer to IVR flow will be available only if the call is performed on behalf of a relevant queue.

Schedule change requests shall be handled as per separate guidelines. For more detailed information, check 4) *Schedule change handling* page section.

REMINDER: Always respect the deadline required for handling by other departments, as per standard routines:

- For **rebooking cases**, the reissue request must be placed on the respective queue at least 4 hours before the original departure and/or at least 6 hours before the new flight. Otherwise, changes are not possible.
- For **ancillary requests**, the request can be handled up to 48h prior to the departure.
- For **all other services**, the request can be handled up to 24h prior to the departure.

How to handle a MOTO Payment - step by step

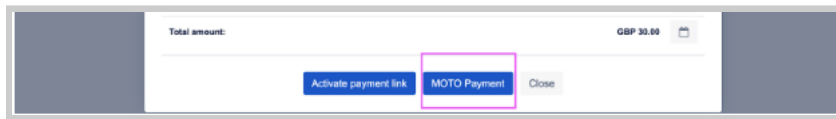

ATTENTION

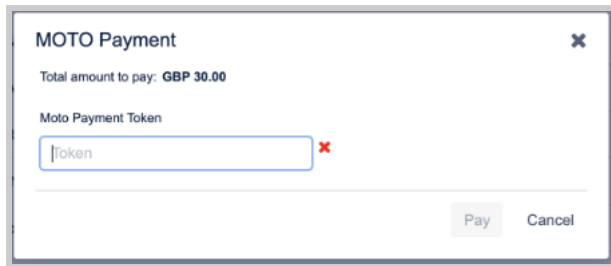

If for any reason, at any stage of the below flow, the call will involuntarily drop, you are obliged to call the customer back, following the standard routine for dropped calls.

Please note that the option to send the customer to IVR flow will be available only if you start a new interaction in Genesys on behalf of the relevant queue. For more information click [here](#).

1. Kindly ask the customer to prepare the card, which he/she will use for the payment.
2. In **Edvin**, create an *Add on cart* as per standard routines and click on the blue **'MOTO payment'** button, at the bottom of the created cart:

3. The below window will pop-up:

4. Reconfirm with the customer all the details of the requested amendments and the final cost along with its breakdown (the cost of all added products/services need to be specified separately along with the total cost).

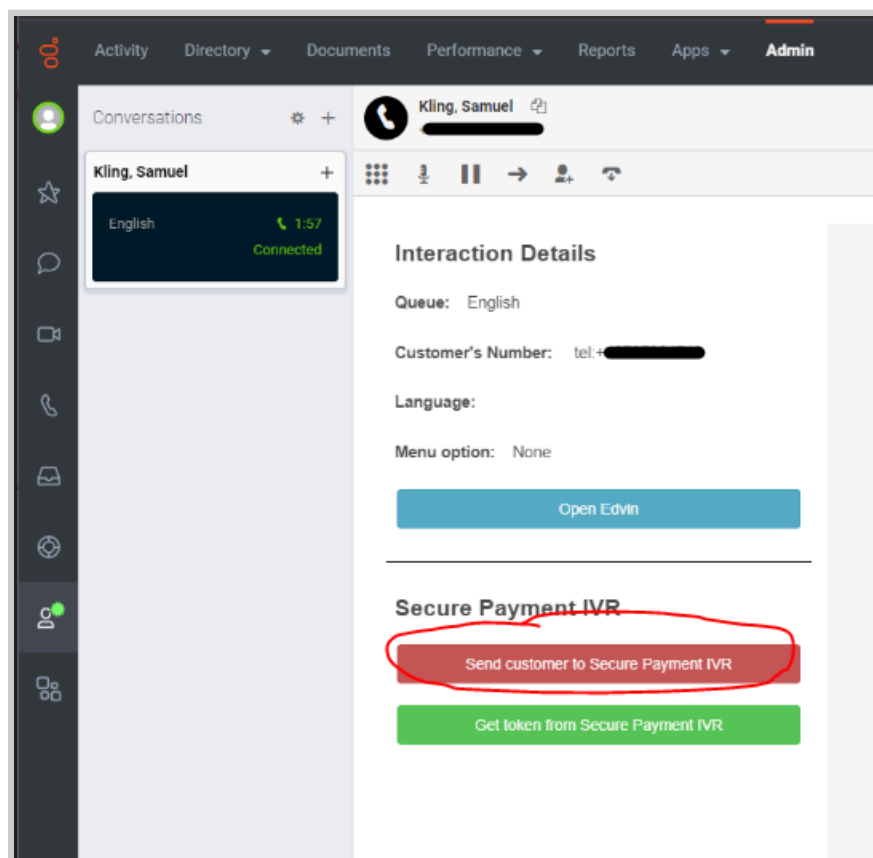

ATTENTION

The customer does **NOT** have a visual summary of the additional service he/she is purchasing.

Verbal reconfirmation of the cost breakdown and the details of the amendment before redirecting the customer to the payment flow is mandatory to avoid mishandlings!

5. Leave **Edvin** and open your on-going phone interaction in **Genesys**.
6. Inform the customer that they will be redirected to the automatic secure payment flow, where an IVR message will ask him/her to insert the card number (16 digits), the card expiration date (in MM/YY format) and CVV code (card verification value - visible at the back of the card).
 - The customer will have a restricted time frame to insert each data (30s for credit card number and 10s for expiration date and CVV each). This information is for your knowledge, you don't have to communicate it to the customer.
 - If data is inserted incorrectly or not within the stated time frame, the customer will be able to retry the automatic flow up to three times for each category failure or will be able to choose to be redirected back to the agent.
7. In **Genesys** use the red button **'Send customer to secure Payment IVR'** under *Secure Payment IVR* section on the main screen of your on-going interaction:

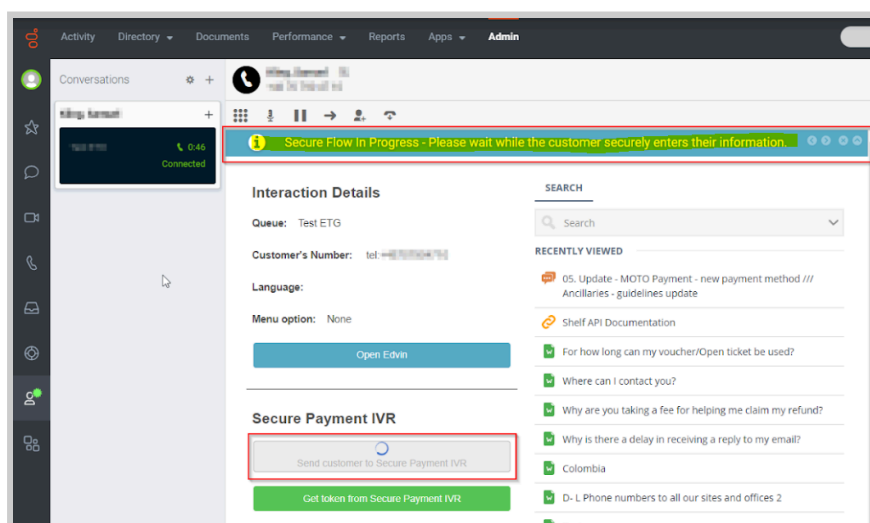

The button 'Send customer to secure Payment IVR' is enabled in Genesys for all queues.

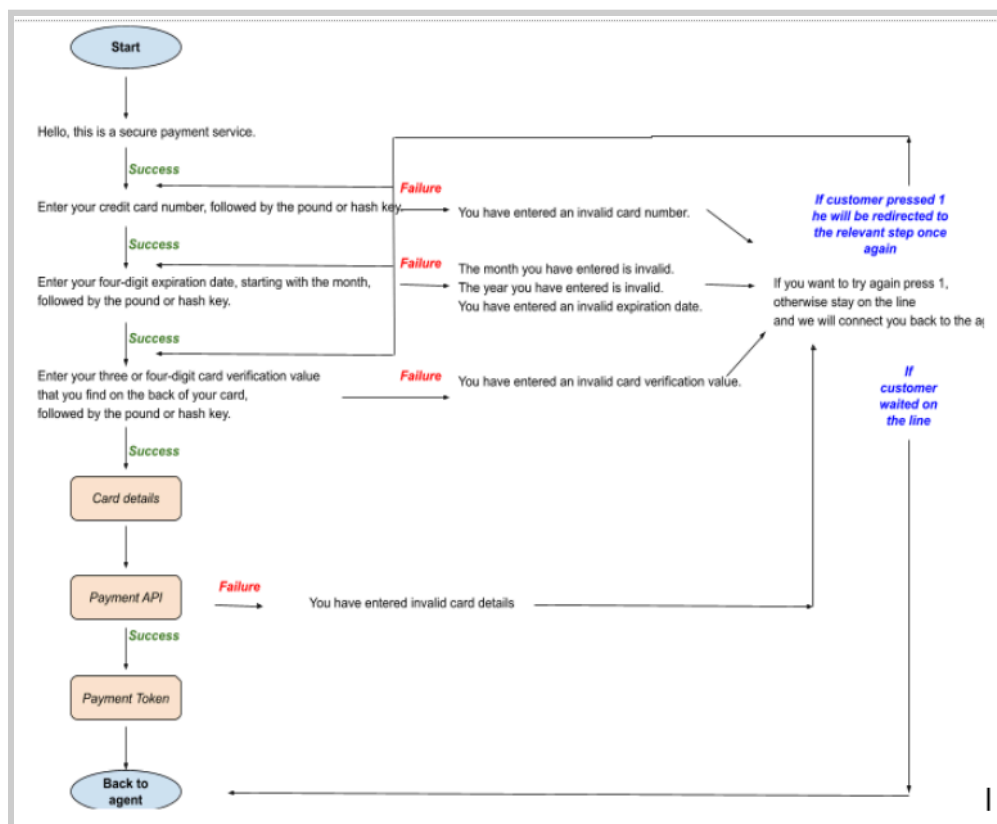

Therefore, always ensure that you have checked in Edvin, if MOTO Payment is available as a form of payment for this specific order. Never send the customer to IVR flow, without checking Edvin first!

8. As soon as you press the button, the customer will be redirected to the automated IVR secure flow.

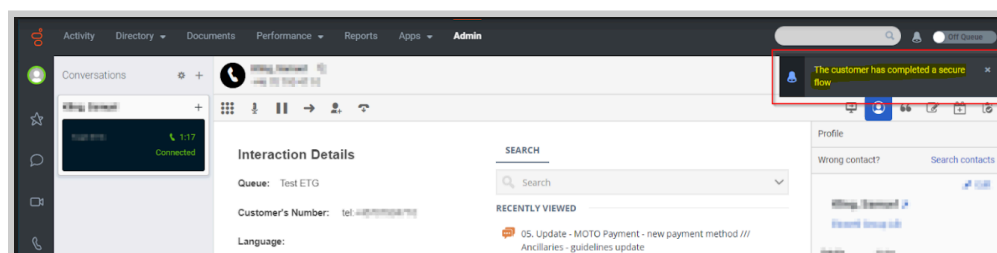

- Banner 'Secure Flow In Progress' will appear on the top of your ongoing interaction during the time, when the customer is inserting their card details:

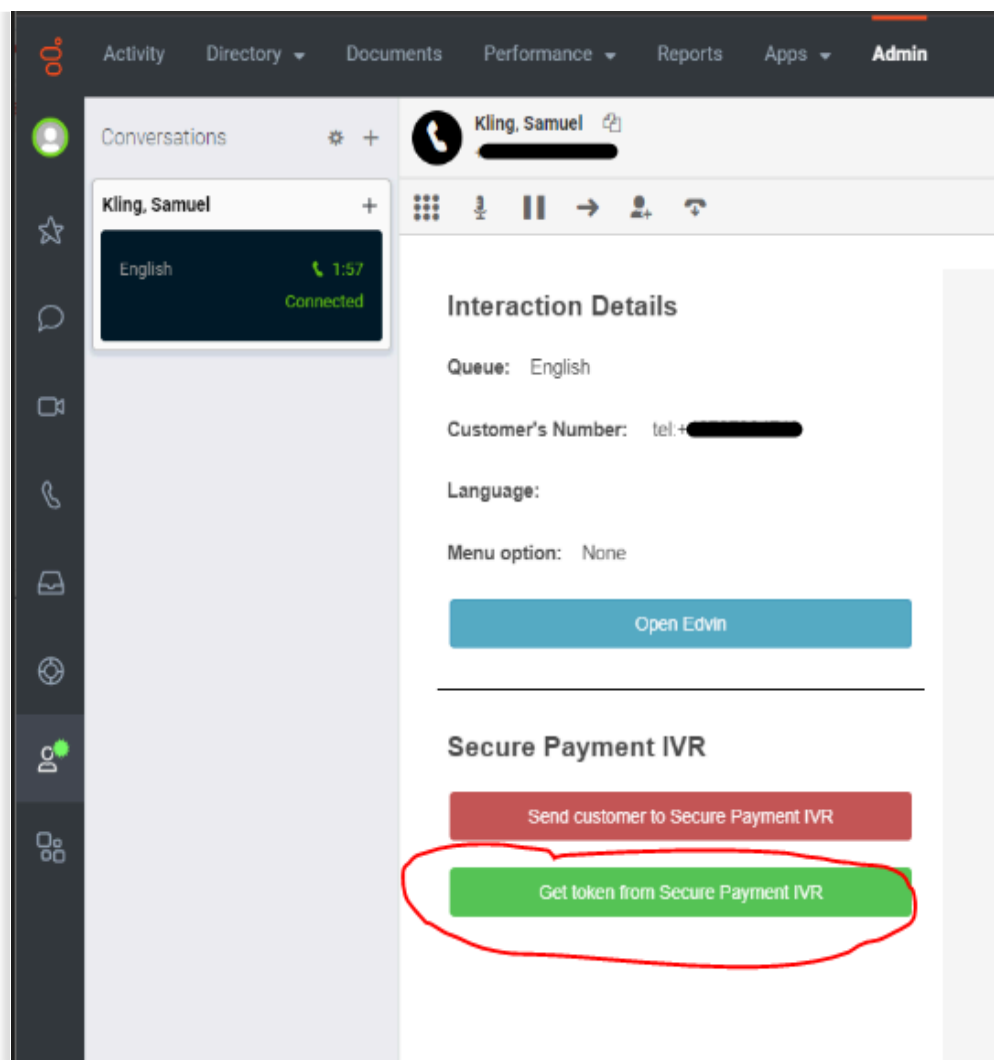

- The exact IVR flow can be found below:

9. The customer will automatically return back to the call once the details of his/her card are inserted correctly. You will see this information in the top right corner of the interaction:

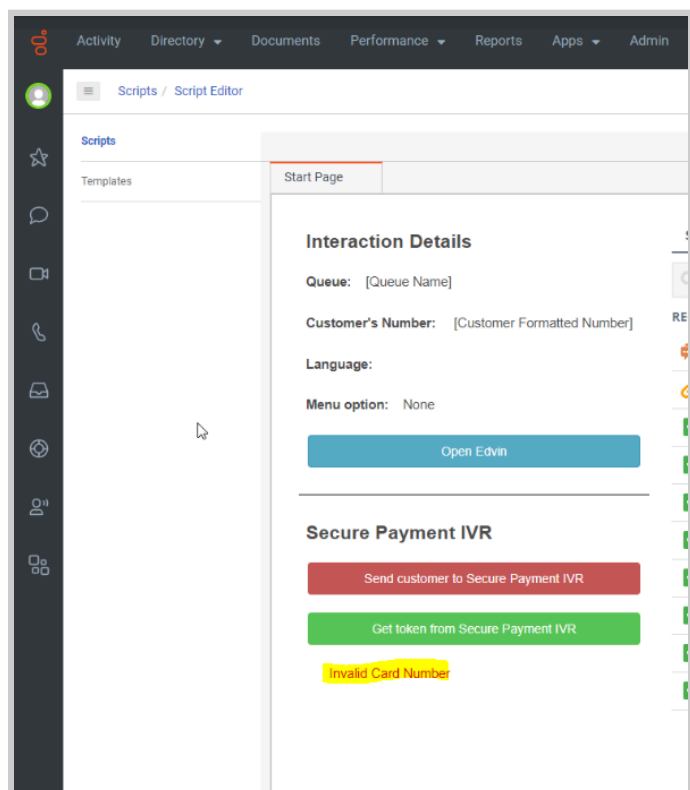

10. Click on the green button 'Get token from Secure Payment IVR' to ensure that the customer has inserted the card details in the correct format:

11. You will receive the token only if the details of the card have been inserted by the customer in the correct format.

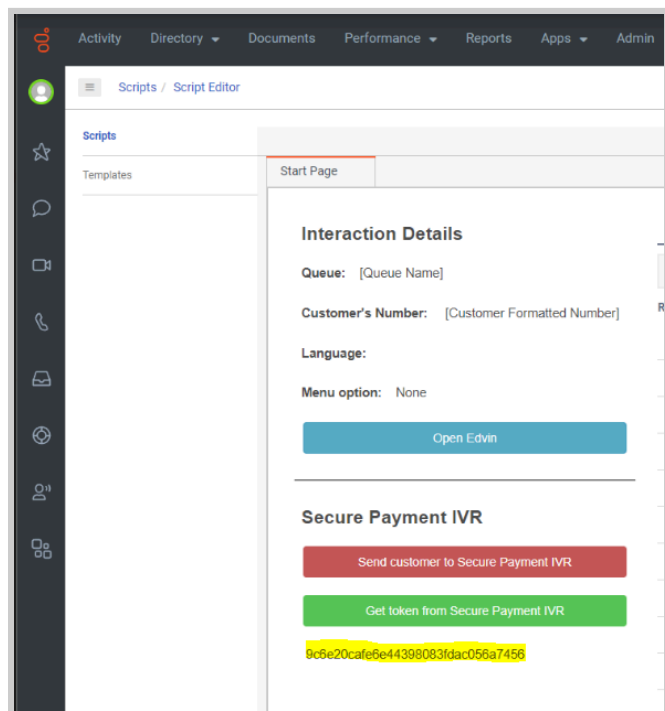

- If the details were not inserted correctly, you will receive one of the following errors.
- Invalid card details (incorrectly inserted card number)
- Invalid expiration date (incorrectly inserted expiration date)
- Invalid CVV (incorrectly inserted CVV):

If an error is received, advise the customer which information was inserted incorrectly and redirect him/her back to the IVR flow by using again the red button "Send customer to secure Payment IVR".

- You may redirect the customer one more time to the IVR flow.
- If two attempts will be unsuccessful, offer the Payment Link option as an alternative as per standard routines.

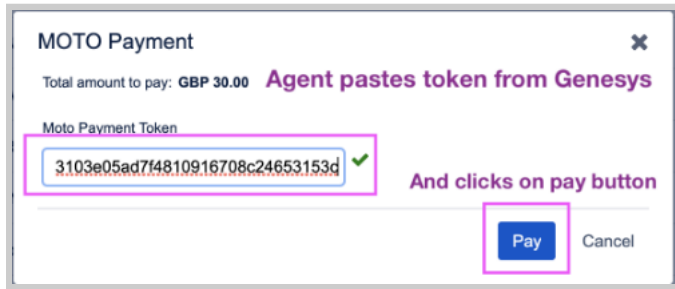

12. The token will be a combination of letters and numbers and will appear under the button "Get token from Secure Payment IVR":

NOTE: creation of the token is just a step to ensure a secure payment. No charge attempt is made at this stage!

13. Once you successfully receive the token, copy it carefully from **Genesys** and paste it in the Moto Payment Token field of your *Add on cart* in **Edvin**.

- If a valid token has been pasted, you will see a green icon confirming that the token is correct.
- Click on the blue **Pay** button at the bottom of the pop-up window to initiate the payment:

14. Once the payment is successfully fulfilled, you will see the below message:

15. Inform the passenger that the payment has been successfully processed and that the passenger will receive the confirmation of the service/ancillary/product as soon as it is fulfilled and maximum within 24h.

- Explain that in case of any irregularities, we will contact the passenger within this deadline.
- Advise the passenger to contact us as soon as possible and not later than 30 minutes after receiving the receipt, if they realize that their receipt email is not aligned with the agreed conditions of the request.

16. Click on the **Close** button in order to close the pop-up window.

17. Proceed with fulfilling the request of the passenger as per standard routines.

ATTENTION  MOTO Payment transaction does not end up on the Payment Dashboard. Once you receive the confirmation of the successful payment, you are responsible for fulfilling the request or for placing the request on the relevant Support queue manually (permitted only for scenarios where the request needs additional support actions!).

Quick checklist of information that is mandatory to be given to the passenger during a call when MOTO Payment is performed

1. Reconfirm **all the details of the added service/product**.
2. Reconfirm **the total cost and its breakdown**.
3. Inform about the **secure IVR flow**.
4. Inform the customer about **successful payment**.

- 5. Inform the customer that **payment confirmation email** will be sent shortly and that they need to **contact us within 30 minutes** from receiving the email **in case they spot any discrepancies**.
- 6. Inform the customer that the **service/product will be processed within 24h** and that the final confirmation will be sent within this time frame.
- 7. Inform the customer that **in case of any irregularities, we will contact them within 24h**.

Step 9

Solution

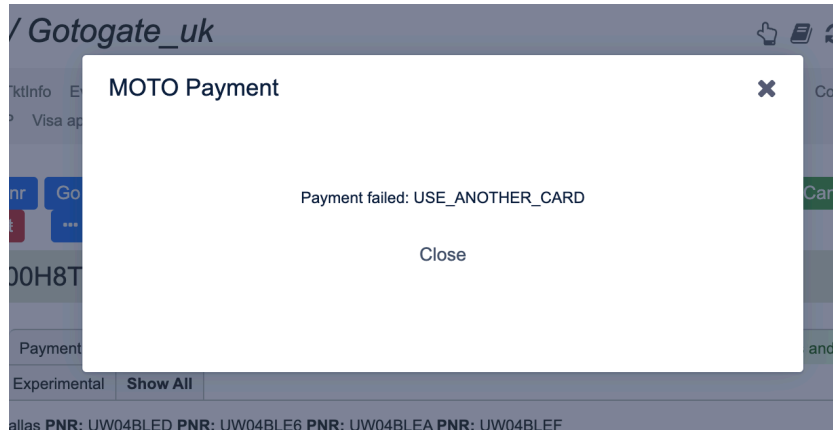

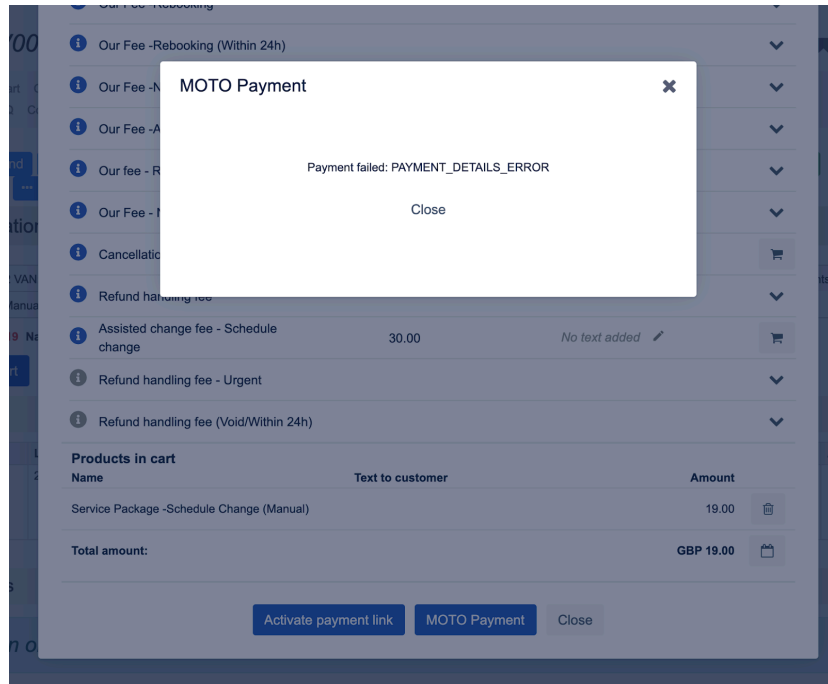

Parent step: 3

Unsuccessful MOTO Payment

How to recognise an unsuccessful payment?

If after entering the token and clicking on the **‘Pay’** button in the pop-up window of your *Add on cart*, you will **NOT** receive a confirmation message stating that ‘Payment was successfully executed’, it means that the payment failed and the customer was not charged.

In such scenario, you will receive a message with a reason for the error, like for example:

You may find the detailed list of possible errors below:

Message shown to the agent	Description	Solution
DECLINED_BY_BANK	Transaction declined by customer's bank.	Advise the customer to check the card details or try a different payment method. Customer shall contact the bank for any further details.
GENERIC_ERROR	Temporary communication issues with the bank.	Payment may be retried again in a few minutes. If the error persists, Customer shall contact their bank.
NOT_ENOUGH_FUNDS	Insufficient funds or exceeded transaction limit.	Advise the customer to check their daily transaction limit and try again or try a different payment method. Customer shall contact the bank for further details.
PAYMENT_DETAILS_ERROR	Invalid card details.	Advise the customer to check their payment card details and retry. If the error persists, try a different payment method. Customer shall contact their bank for further details.
TECHNICAL_ERROR	A technical error occurred.	Payment may be retried again in a few minutes. If the error persists, Customer shall contact their bank.
USE_ANOTHER_CARD	Transaction is failed due to expired or blocked card, country restrictions or fraud etc.	Advise the passenger to make sure your card is valid or supported as a payment method. If the error persists, try a different payment method. Customer shall contact their bank for further details.
MISSING_ERROR	Reused token or wrong token value	Check whether the token was copied correctly or used more than once.

What to do in case of an unsuccessful payment?

1. Inform the customer that the payment didn't go through.
2. Optional step: Only if the customer demands the written confirmation that the payment didn't go through, you may send an email template 'MOTO Payment attempt failed' from Edvin.
3. Offer to retry the payment again via MOTO method, preferably by using a different card.
 - Each token can be used only once, so you have to follow the IVR path and token creation guidelines from the beginning in order to make another payment attempt!
 - You may redirect the customer one more time to the IVR flow. Recommend to the customer to use a different card. If two attempts are unsuccessful, offer the Payment Link option as an alternative.
 - If the customer declines the MOTO payment, you also may offer the payment via the Payment Link as per standard routines.
4. Act as per applicable routines and accordingly to the form of payment chosen by the passenger.
5. If the customer requests proof of the unsuccessful payment attempt, you may use the fixed template - *MOTO Payment attempt failed* (under Frontline - Others folder). This template doesn't need to be used if the customer doesn't request it.

Step 10

 Solution

Parent step: 3

How MOTO Payment is visible in Edvin?

Once the payment is successfully fulfilled, you will find it in the below tabs:

1. Add on purchases

Payments performed via MOTO will appear in the standard list under the section *Add on orders*. They will be marked with **(MOTO)** in *Payment type* column:

Create add on cart Show price list

Add on carts

No Add on carts found

Add on orders

Order date	Order number	Created by	Products	Total amount	VAT	Payment type	
2021-09-24 09:51:08	DTESTH6U5-1	Chrysa Michail	Assisted change fee - Schedule change View	30.00	30.00	0.00	Credit Card (MOTO)

2. Payment transactions

Payments performed via MOTO will appear in the standard list of transactions. They will be marked with **(MOTO)** in the *Payment type* row.

3. Add on Sales in Order Summary

Services added with payments performed via MOTO will normally appear in the Order Summary section, under *Add on Sales*.

- It won't be visible here that the add ons were paid with MOTO. If you wish to check payment method, refer to point 1) and 2)

Summary

Step 11

Solution

Parent step: 3

MOTO Payment is successful, but the request can NOT be finalized

ATT: If for any reason, at any stage of the below flow, the call will involuntary drop, you are obliged to call the customer back, following the standard routine for dropped calls. Please note that the option to send the customer to IVR flow will be available only if you start a new interaction in Gensys on behalf of the relevant queue. For more information click [here](#).

In some cases, you will receive the successful payment, but you won't be able to fulfill the customer's request on the spot. Such scenarios may be divided into two categories:

A. The availability or the cost of the service/ancillary has changed

Scenarios including, but not limited to:

- For rebooking requests: booking class availability change, selected flights not applicable anymore
- For ancillary requests: chosen ancillary not available anymore
- **How to handle such cases?**

1. First, check if the service/ancillary is available and can thereby later be saved and confirmed.

2. If the same service is no longer available at the cost initially given to the passenger, inform the passenger that the availability has changed and advise that an additional cost is required in order to fulfil the requests.

- If the customer agrees to cover the additional charge:
Create a new *Add-on cart* for the remaining cost, confirm that the customer agrees to MOTO Payment and proceed with the payment as per general flow.
Do **NOT** suggest the Payment link method in such cases, as it increases the risk of losing the availability again.
- If the customer declines to cover the additional charge and demands a refund of the initial add on payment:
Follow standard routines for refunds of service that has not been provided. More details can be found [here](#).
- If the customer declines to cover the additional charge and asks to be provided alternative service within the cost already paid:
Suggest an available alternative (a different flight connection, a different seat number etc.) and if accepted, fulfil the actions as per standard routines.

3. If the same service can not be saved:

Suggest an available alternative (a different flight connection, a different seat number etc.)
If the customer doesn't accept the proposed alternative, follow standard routines for refunds of service that has not been provided. More details can be found [here](#).

B. The request can not be practically fulfilled

Scenarios include, but are not limited to:

- Technical errors
- Requests requiring Support actions (for example rebooking scenarios, name correction)
- Not able to finalize rebooking requests on the airline's website or a VAN card cannot be created
- **How to handle such cases?**

1. First, check if the service/ancillary can be saved and confirmed by the provider.

2. If the service/ancillary can be saved, but you can not finalize the request either due to lack of confirmation from the provider or due to the fact that Support actions need to be taken, inform the passenger that you will forward the request to another department for handling.
3. If the request cannot be finalized on the airline's website (for Portals or LCC handling) or VAN cannot be created:

Place the order manually on the Support Queue as per the standard routine [here](#).

ATT: MOTO Payments do not end up manually on the Payment Dashboard. If you don't place the order on the relevant Support Queue manually as per the routine [here](#), the order will remain unhandled!

Attention! If you encounter any issue with VAN creation, it is important that you need to follow the routine [here](#). This means that first you need to place the order on Support and the Support agent will raise a System Support Jira for VAN creation.

3. If the same service can not be saved:

Suggest an available alternative (a different flight connection, a different seat number etc.)

If the customer doesn't accept the proposed alternative, follow standard routines for refunds of service that has not been provided. More details can be found [here](#).

Step 12

Solution

Parent step: 4

What is a Payment Link and when to use?

What is it?

A payment link is a form of payment, which allows the customer to fulfill the payment outside of the call interaction. The agent sets the time frame for which the payment link will be active and sends the secure payment link directly to the customer's contact email.

The agent is not handling any sensitive data, all the card details are inserted by the customer directly to the secure payment link. Once the payment is fulfilled, the payment link ends up in the Support dashboard

When to use?

A payment link is not a preferred payment method and should not be used as a first option.

It can be used for the below scenarios:

- for requests received via phone interaction, where customer could not proceed with the payment on the spot
 - Due to errors during the payment flow
 - Due to customer's decision (e.g. customer does not have the payment card handy, declines processing via MOTO)
- ATT:** MOTO should always be suggested **as the first payment option**. Payment link can be alternatively sent only if the above conditions are met and there is sufficient availability and remaining time before the scheduled departure!
- for requests received via email interaction, which you are allowed to handle via email as per standard routines
 - for all requests for LATAM market orders as MOTO is not supported for those markets
 - for request from AU and CA market if the customer can use only Maestro card (if any other card - refer to MOTO)
 - during calls when active monitoring is in place (such as Supervisor monitoring or other agent shadowing)

- when the customer wants to think or discuss about it before proceeding to the payment. This way, a possible second contact for the same reason might be avoided.

Please note, that whenever you offer a Payment link, you shall state in your errand the reason why you could not use MOTO (i.e: pax denied MOTO, MOTO not enabled etc.).

If MOTO is not available on a particular order or the customer declines using MOTO, but still wishes to proceed with the payment on the spot and during the phone call, you should wait on the line until the payment is processed and handle the paid request accordingly.

Otherwise, you have to inform the customer that the price and availability are not guaranteed. The last payment date/time shall be set as described below for each type of request:

For rebooking cases, the last payment date/time for Payment link shall be set for 30 minutes (in exceptional cases, when you have sufficient availability and when passenger clearly asks for longer time, you may set the Payment link for maximum 1 hour).

The deadline of last valid time for Payment Link should be 16:30 local time for both ATH/UPA.

REMINDER: The reissue request must be placed on the respective queue at least 4 hours before the original departure and/or at least 6 hours before the new flight. Otherwise, changes are not possible.

For ancillary cases, the last payment date/time for the Payment link can be set for maximum 48 hours from the moment of sending the link, as long as this time frame is not passing the 48 hour before the departure.

For all other cases, the last payment date/time for a Payment link can be set for maximum 24 hours from the moment of sending the link, as long as this time frame is not passing the 48 hour before the departure.

NOTE: If you handle an order with scheduled departure within the next 48h and the request requires additional payment, you should always proceed via MOTO Payment method. DO NOT send Payment Link for such cases, unless the case falls under scenarios where MOTO can not be supported.

Schedule change requests shall be handled as per separate guidelines. For more detailed information check 4) *Schedule change handling* page in this decision tree.

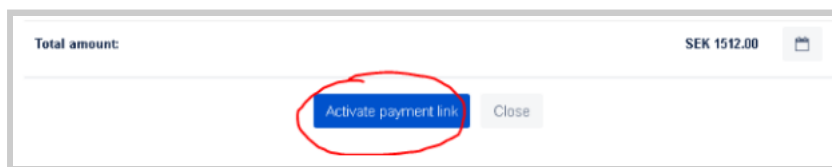

Step 13

Solution

Parent step: 4

How to handle a Payment Link - step by step

1. In **Edvin**, create an Add on cart as per standard routines and click on the blue 'Activate payment link' button, at the bottom of the created cart.

A pop-up window will appear:

- a. Set the Last Payment date by clicking on the calendar icon.
 - All the requests can be handled via payment link up to 48h prior to the scheduled departure time.
 - For ancillary requests, the last payment date/time should be set for a maximum 48h from the payment link creation.
 - For rebooking requests, the last payment date/time should be set for a maximum 1h from the payment link creation.
 - For Name change/correction requests, kindly follow the guidelines mentioned in this [Shelf Page](#).
 - For all other requests, the last payment date/time should be set for a maximum 24h from the payment link creation.

- b. Insert the *Order note*.

- Please write clearly in the Order Note what you have added and to which passenger. This information is for internal handling, so please insert it in English.

c. You may amend email address, if necessary.

d. Choose Send Email to send the Payment link directly from Edvin or use Copy to clipboard to copy the URL to your email/chat correspondence and Press Activate.

ATTENTION For chat interactions, you need to copy/paste the link in the chat and handle the request end to end. Do not leave the PL to be handled by Support Agents!

PLEASE NOTE Never paste a Payment Link in the Translation Widget. The Payment Link must always be in its original form and will not be functional after any character the Translation widget may change.

For rebooking requests, the correct option shall be used according to your task:

1. Phone Agent: Sending PL to the customer directly during the call **and the customer agrees and pays on the spot during the phone call**

Direct Send Email option shall be used

The passenger is verbally informed about all the details of the transaction + for double verification he/she can see the Order Information section in the PL and the final receipt after the payment is done.

2. Phone Agent: Sending Payment Link to the customer directly during the call, **but the customer wants to pay later**

Copy to clipboard option shall be used and PL must be copy-pasted to the template *CHG request - permitted + PL 3.D*

Since the customer is given a longer deadline to pay, he/she shall have access to a 'refresher' in regards to the phone conversation with the agent before he/she fulfills the payment.

3. Support Agent: Sending Payment Link as **post-conversation handling**

Copy to clipboard option shall be used and PL must be copy-pasted to the template *CHG request - permitted + PL - Support 3.D*

Activate payment link

Total amount: SEK 500.00

Last payment date

Customer (SE): 2019-03-26 10:30

Office (Uppsala): 2019-03-26 10:30

Email:

aaa@aaa.com

Order note (not displayed to customer):

As we use 128-bit SSL encryption to protect your data, paying by card is as safe as it gets.

Gotogate / Travelpartner AB will be shown as recipient on your receipt

4. Wherever MOTO Payment is available and approved by the passenger, the Payment link no longer should be used for direct payment. If the customer declines to pay on the spot, there is no need for you to wait on the line until the customer fills in the details.
- After sending the payment link and ensuring that the customer has received it, end the call by informing the customer that the request will be handled within 24h from the moment of fulfilling the payment and that in case of any irregularities our Support Team will contact the customer.
 - Once the payment transaction is confirmed, the Payment Link will end up on the top of the order and will be automatically placed on the correct Dashboard to be further handled by the Support team.

ATTENTION  **If MOTO is not available on a particular order or the customer declines using MOTO, but still wishes to proceed with the payment on the spot and during the phone call, you have to wait on the line until the payment is processed and handle the paid request accordingly.**

For such cases, when you are handling the Payment link on the spot, remember to remove the Payment link from the Payments Dashboard once the request is fulfilled.

You will see the paid Payment Link on the top of your order. Click on Execute action for all. A pop-up window will show up, where you need to choose Remove from the queue and confirm with the OK button:

	0.00 PLN	0.00		
	50.00 PLN	2.00		

Schedule change handling

When to use MOTO (Phone)

- Passenger asking for a second alternative and authorization is not required.
- Passenger asking for a second alternative and authorization is required by email. The phone agent needs to send the email to the airline asking for authorization, and then place it on the Waiting Supplier reply.

ATTENTION

MOTO Payment does not end up manually on the Payment Dashboard. If you don't place the order on the relevant Support Queue manually, the order will remain unhandled!

When to use Payment Link (Phone)

- Passenger asking for a second alternative and authorization need to be requested by phone. In such cases, please use normal payment link and avoid MOTO.

For a step-by-step process, please check the relevant page in this article.
