Step 1 - Starting point

 Question

No linked steps

For cases with retail losses when the passengers are already at the airport please check also the process described [here](#).

Question	
1. FL ATH/UPA	Step 3
2. FL IN ETG	Step 4
3. Retail loss recovery OUT	Step 9
4. QA Methodology to follow	Step 5
5. Reporting	Step 6
6. Retail Loss Recovery - Register errand path	Step 2

Step 2

 Question

Parent step: 1

Retail Loss Recovery - Register errand path

New Question	
1. FL ATH/UPA	Step 7
2. FL IN ETG	Step 8

Step 3

 Solution

Parent step: 1

FL ATH / UPA

This process applies only to Athens and Uppsala

FL agent

Whenever an FL agent identifies a possible RL case, should send the order urgently to Support (more information on how to Send the case to Support can be found [here](#))

Support agent

1. Support agent will have to investigate the case (detailed steps [here](#))
2. Raise a [RL Jira](#) by following the prefilled template

Exception!

ONLY for human error and tech error when the estimated retail loss is 200 EUR and more agent may try to save the loss by contacting the airline or customer.

In order to proceed:

1. After raising an RL Jira according to steps 1, 2 described above, [assign it to yourself](#)
2. Open the Jira and change the status to **Recovery in progress**
3. Fill in the fields in a pop-up window:
 - **Recovery start time:** by default, it will show you SE current time - if it is correct, no need to change it
 - **Estimated cost (EUR)**
 - **Reason code**
 - **Related process**
 - **Error category**
 - **department** (department of the agent responsible for the error)
 - **Location** (location of the agent responsible for the error)
 - **Recovery agent** - your name

Recovery in progress

Recovery in progress Cancel

4. Try to save the loss by contacting the airline or customer. For outbound phone interactions always use the wrap-up code "RL-resolved" in Genesys IF the customer/airline has approved the recording of the calls as per usual routine.
 - **ATT!** In such cases, agent should always apply critical thinking and use personal experience keeping Quality attributes in mind
5. **(Optional)** In the event, the passenger/airline is unreachable agent will send an email to the passenger/airline via E-track and keep it on a follow-up for not more than 72 hours. After sending the email change RL Jira status to **Recovery Waiting reply**
 - If no revert from the passenger/airline, we will close the Jira taking a loss on us.
 - However, we need to apply critical thinking here, if the departure is not too close, and we have enough time to wait for the schedule change to occur to save loss, we can apply SC logic and wait.
 - In case of schedule change, if we can obtain a refund from the YY, that can save the loss, for cancellations, we can move forward with it, however, its case to case scenarios and critical thinking should be applied, take approval from Manager/Coordinator
6. Once finalize the outcome, the support agent will have to change Jira status to **Recovery finalized** and fill in all the fields in a pop-up window:
 - **Recovery status:** Select from the drop-down menu
 - **Actions taken:** action taken by the support agent in order to recover the loss. Select from the drop-down menu
 - **Loss after recovery (EUR):** in case of full recovery add "0"
 - **Recovery end time:** by default, it will show you SE current time - if it is correct, no need to change it

- If the amount was not fully recovered, change the assignee to the FL Coordinator/Manager you checked the case with

7. If the Jira is partially recovered or not recovered, assign it to your TL/ FL coordinator/ Manager to approve the retail loss. If the Jira is fully recovered, proceed with all the actions in order to solve the issue towards the customer and leave the Jira status as it is, since it will automatically launch into the Quality dashboard to be reviewed.

8. In case the Jira is approved and assigned again to you, make the necessary actions and change the Jira status to **Done**. **Attention:** Step number 8, is important in order to signify that the RL Jira has been resolved and it can be reviewed by the Quality team. Do not forget it!!

Important!: If at any point while handling the case:

- the customer proceeds with a chargeback, close the Jira by selecting the status **"Chargeback"**. No further action is required.
- the case is fully taken over or handled by CR, close the Jira by selecting the status **"Handled by CR"**. No further action is required.
- you notice that there is a duplicate RL Jira, follow the guidelines described in "[Dupe RL Jiras](#)"

FL Coordinator or Manager

> If the retail loss less than 200 EUR and no recovery process is needed:

1. FL Coordinator or Manager will have to pick up the issue from the respective section of the **Retail loss Jira Dashboard**
2. Change Jira status to **"Escalation TL#1"**
3. Review the case
4. If in the meantime:
 - the customer proceeds with a chargeback, close the Jira by selecting the status **"Chargeback"**. No further action is required.
 - the case is fully taken over or handled by CR, close the Jira by selecting the status **"Handled by CR"**. No further action is required.

- you notice that there is a duplicate RL Jira, follow the guidelines described in "[Dupe RL Jiras](#)"

The screenshot shows a dropdown menu titled "Escalation TL #1" with a lightning bolt icon and an "Actions" dropdown. The menu lists several actions with corresponding status labels: "Approve" (APPROVED), "Send to recovery" (RECOVERY), "BO/QA Support" (BO/QA SUPPORT), "FL/QA Support" (FL/QA SUPPORT), "Recovery in progress" (RECOVERY IN PROGRESS), "Chargeback" (CHARGEBACK), "Dupe Jira" (DUPE), "Handled by CR" (HANDLED BY CR), and "Reject" (REJECTED). A "View workflow" link is at the bottom.

- nothing of the above has happened, continue to step number 5

5. Select "Approve" or "Reject" to change the status of the issue and fill in all the fields that will appear in a pop-up window.

The screenshot shows the "Approve" pop-up window. It contains several sections: "Decision maker" (Name of the person who took a decision), "Estimated cost (EUR)" (0), "Reason code" (None), "Discount code" (None), "Related process" (None), "Error category" (None), "Tag" (None), "Agent's department" (None), "Agent's location" (None), "Resolution note" (empty text area), "Assignee" (empty dropdown), "Deployed in production date" (empty date field), and "Comment" (rich text editor). At the bottom, there are "Approve" and "Cancel" buttons.

5. In case of approval, add the reason code in Edvin

6. Assign it again to the Support agent to proceed with further actions. Make sure that the agent changes the status of the Jira to **Done** once all necessary actions are finished.

ATTN!

ONLY for human error and tech error when estimated retail loss is 200 EUR and more **AND support agent didn't try to recover the loss but you think we should do**. After "Escalation TL#1" you can change Jira status to **Send to recovery** and assign it to the agent who should do the recovery attempt.

Don't forget to add a comment with your guidelines for the agent

> If the retail loss is 200 EUR and more and the Support agent has finalized the recovery:

1. FL Coordinator or Manager will have to pick up the issue from the respective section of the **Retail loss Jira Dashboard**
2. For **partially recovered or not recovered Jiras** add a reason code in the order in Edvin and select "Approved" to change the status of the Jira. Fill in all the fields that will appear in the pop-up window.
Note : For **fully recovered retail losses**, there is no need for further actions from the TL/ FL coordinator / Manager. The Jira will automatically launch into the Quality dashboard to be reviewed. Just check that all

[illegible]

Assign the Jira to the Support agent to proceed with the needed actions. Make sure that the agent changes the status of the Jira to **Done** once all necessary actions are finalized.

Done   Approved 

Parent step: 1

This process applies only to ETG India

1. Change Jira status to **"Escalation TL#1"**
2. Review the case
3. If after your investigation you notice that:
 - the customer proceeded with a chargeback, close the Jira by selecting the status **"Chargeback"**. No further action is required.

- the case is fully taken over or handled by CR, close the Jira by selecting the status “**Handled by CR**”. No further action is required.
- there is a duplicate RL Jira, follow the guidelines described in "[Dupe RL Jiras](#)".

The screenshot shows a Jira workflow menu with the following actions and their corresponding status transitions:

- Approve → APPROVED
- Send to recovery → RECOVERY
- BO/QA Support → BO/QA SUPPORT
- FL/QA Support → FL/QA SUPPORT
- Recovery in progress → RECOVERY IN PROGRESS
- Chargeback → CHARGEBACK
- Dupe Jira → DUPE
- Handled by CR → HANDLED BY CR
- Reject → REJECTED

At the bottom, there is a link to "View workflow".

- nothing of the above has happened, continue to step number 4

4. **ONLY for human error and tech error when the estimated retail loss is 200 EUR and more** change the status of the Jira to **Send to recovery** so the dedicated agent could proceed with a recovery attempt. Fill in all fields that will appear in a pop-up window

The screenshot shows the "Send to recovery" pop-up window with the following fields:

- Estimated cost (EUR): 0
- Reason code: None
- Related process: None
- Error category: None
- Tag: None
- Agent's department: None
- Agent's location: None
- Assignee: [Empty field]
- Deployed in production date: [Empty field]
- Comment: [Empty text area]

Buttons at the bottom: "Send to recovery" and "Cancel".

5. **IF the estimated retail loss is less than 200 EUR**, select “**Approve**” or “**Reject**” to change the status of the issue and fill in all the fields that will appear in a pop-up window

The screenshot shows the "Approve" pop-up window with the following fields:

- Decision maker: [Empty field]
- Estimated cost (EUR): 0
- Reason code: None
- Discount code: None
- Related process: None
- Error category: None
- Tag: None
- Agent's department: None
- Agent's location: None
- Resolution note: [Empty text area]
- Assignee: [Empty field]
- Deployed in production date: [Empty field]
- Comment: [Empty text area]

Buttons at the bottom: "Approve" and "Cancel".

6. Take any additional action needed and register an errand

Unrecovered or partially recovered case:

1. Pick up the issue from the respective section of the **RL Jira Dashboard**
2. Select **“Approved”** to change the status of the issue and fill in all the fields that will appear in a pop-up window

3. Add a reason code in Edvin and assign the case to the agent to resolve it. Make sure that the agent changes the status of the Jira to **Done** once all necessary actions are finalized.

Incorrectly sent for recovery:

1. FL Coordinator or Manager will have to pick up the issue from the respective section of the Retail loss Jira Dashboard
2. Review the case
3. Select **“Approve”** or **“Reject”** to change the status of the issue and fill in all the fields that will appear in a pop-up window.
4. In case of approval, add the reason code in Edvin
5. Assign it again to the Support agent to proceed with further actions. Make sure that the agent changes the status of the Jira to **Done** once all necessary actions are finalized.

Recovery agent

1. Pick up the issue from the respective section of the RL Recovery Jira Dashboard
2. change status to **Recovery in progress**
3. In a pop-up window fill in the following fields:
 - **Recovery start time:** by default, it will show you SE current time - if it is correct, no need to change it

- **Recovery agent** - your name

4. If after your investigation you notice that:

- the customer proceeded with a chargeback, close the Jira by selecting the status "**Chargeback**". No further action is required.
- the case is fully taken over or handled by CR, close the Jira by selecting the status "**Handled by CR**". No further action is required.
- there is a duplicate RL Jira, follow the guidelines described [here](#).
- that the retail loss is less than 200 EUR and therefore it should not have been sent for recovery, change the status to "**Incorrectly sent to recovery**", assign the RL Jira to the reporter and move to your next case.

- nothing of the above has happened, continue to step number 5

5. Try to save the loss by contacting the airline or customer. For outbound phone interactions always use the wrap-up code "**RL-resolved**" in Genesys **IF** the customer/airline has approved the recording of the calls as per usual routine.

- **ATT!** In such cases, agent should always apply critical thinking and use personal experience keeping Quality attributes in mind

6. **(Optional)** In the event, the passenger/airline is unreachable agent will send an email to the passenger/airline via E-track and keep it on a follow-up for not more than 72 hours. After sending the email change RL Jira status to **Recovery Waiting reply**

- If no revert from the passenger/airline, we will close the Jira taking a loss on us.
- However, we need to apply critical thinking here, if the departure is not too close, and we have enough time to wait for the schedule change to occur to save loss, we can apply SC logic and wait.
- In case of schedule change, if we can obtain a refund from the YY, that can save the loss, for cancellations, we can move forward with it, however, its case to case scenarios and critical thinking should be applied, take approval from Manager/Coordinator

7. Once you have finalized the outcome, the recovery agent will have to change Jira status to **Recovery finalized** and fill in all the fields in a pop-up window:

- **Recovery status:** Select from the drop-down menu
- **Actions taken:** action taken by support agent in order to recover the loss. Select from the drop-down menu
- **Loss after recovery (EUR):** in case of full recovery add "0"

- **Recovery end time:** by default, it will show you SE current time - if it is correct, no need to change it

ATTN!

All Jira issues with Jira Issue Status “Done” and “Recovery Finalized” will be automatically removed from the FL managers' dashboard and appear in the QA Jira Dashboard for further QA review.

Step 5

Solution

Parent step: 1

QA Methodology to follow

Passengers

1. Never force the passengers to pay extra for the losses we have incurred due to our agent error. Yes, certainly we can try to convince them & give alternate options that will reduce our losses
2. ETG purely believes in customer service & we have to be loyal with our customers, remember the ETG value and try to create a sense of urgency for us to be able to conclude our findings.
3. Be natural & try to not use scripts, always keep initiating small talks, building rapport with the customers will help us gain the trust, it's not important that we have to save the complete loss, even partial savings are better than to lose the customer.
4. Make sure to explain to the customer that you are well versed with the products & very knowledgeable. Establishing and maintaining a deep personal connection with your customers is highly important. Often, it can be one of the key factors that will drive better!
5. Make clear errand notes with detailed information, as we don't have run behind handling time, our core task is saving the retail losses.
6. Please make sure the TAT to follow up on any files with airlines and Customers is 72 hours, even if we have no reply then we will close the case and accept the loss.

Airlines:

1. ETG has a very good relationship with the airlines that we do not want to spoil therefore while speaking with them make sure we are polite & be convincing enough to get the waivers that will help us save the loss.
2. Make sure to document the agent's name & contact number established with them in a comment section of the RL Jira

Step 6

Solution

Parent step: 1

Reporting

To extract data that includes RL Jira issues where we have finalized the recovery attempt:

1. Open [RL Recovery](#) filter in Jira
2. Make sure you have all the columns you need and that they are in the correct order
 - You can move columns around (drag and drop)

- You can also add or remove the columns as needed. To do this, click **Columns** in the upper right corner and make sure you check or uncheck the box next to the desired field. Don't forget to click **Done** to save your changes

3. In the upper right corner click **Export** and select **CSV (current fields)**
4. Download the file
5. Without opening it, move the file to Google Drive and then open it as a Google Sheet

Step 7

Solution

Parent step: 2

FL ATH/UPA - Errand path

Kindly find below an overview of the register errand flow:

Channel	Cate gory	Type	Action	Description
16:Frontend in progress	53: Retail Loss	1:Retail loss recovery	7: Already on Support	When FL agents call/email the customer/airline company in order to try and save our loss of over 200 EUR due to human error or tech error.
17:Frontend finalized	53: Retail Loss	1:Retail loss recovery	5:Other	When the case is finalized.

Step 8

Solution

Parent step: 2

FL IN ETG - Errand path

Kindly find below an overview of the register errand flow:

Channel	Cate gory	Type	Action	Description
40:Retail loss recovery- In progress	53: Retail Loss	1:Retail loss recovery	2:Send email-airline/custo mer	When we send an email to the airline/customer and we wait up to 72 Hours in case we receive a reply. The case/order remains on Support as "Awaiting customer/airline".
41:Retail loss recovery- Finalized	53: Retail Loss	1:Retail loss recovery	1:Contact-airline/custo mer	When we resolve the case on the spot and no further communication is required. The case is finalized.
41:Retail loss recovery- Finalized	53: Retail Loss	1:Retail loss recovery	5:Other	If a scenario occurs, other than the above.
40:Retail loss recovery- In progress	53: Retail Loss	1:Retail loss recovery	5:Other	If a scenario occurs, other than the above.
42:Retail loss recovery- Already Handled	53: Retail Loss	1:Retail loss recovery	4:Already Handled	When the case is not handled yet by ETG, and, at the same time, the customer calls the airline company and resolves the case.

Step 9

Solution

Parent step: 1

Retail loss recovery OUT

Every time the OUT team comes across a retail loss case (tech error or human error, regardless of the location of the agent responsible for the mistake), OUT TL/Mgr will have to check if the estimated loss is less than 200 EUR and if ETG approval is required.

ETG Approval is needed when the OUT team comes across a retail loss case and the location of the agent responsible for the mistake is different from the OUT team's location. For example CNX team needs ETG Approval for a retail loss, when the responsible agent is not working in a CNX location.

Scenario 1 - IF ETG approval **is required**:

- [OUT] Escalate the case to ETG via [OUT support](#) on Service Desk as per normal routine (more information can be found [here](#))
- [ETG] Will handle the case as per normal routine

Scenario 2 - IF ETG approval **is NOT required** and the estimated retail loss is **less than 200 EUR**

- [OUT] TL/Manager may approve the loss and handle the case as per normal routine

- Scenario 3 - IF ETG approval **is NOT required** and the estimated retail loss is **200 EUR and more:**
- [OUT] Send the case to ETG for Retail loss recovery via [Retail loss](#) portal on Service Desk
 - Go to [Service desk](#)
 - Click “Show more portals”
 - Select [Retail Loss](#) portal
