

What is a fare hike?

A fare hike is considered wherever a passenger is purchasing a ticket on our website and the price might be changed.

When the price changes during the booking process, the flow will be interrupted, and a message will be presented to the customer. The message shown will inform them that the price has increased from x amount to z, and will look like the message below:

Following this message and to be able to know internally that this was indeed presented to the customer, and he accepts the fare hike, an *Order note* will also be added automatically (errand under the Base/Bookings tab) along with the log *OrderNote* under Events and logs Merged Events Logs.

The errand under the Base/Bookings tab will look like this:

	Created	Department	Title	Note
	2021-06-15 04:57 Created By Customer		PriceChange	Price change shown to user; Old price: 5700.0; New Price: 7410.0

The OrderNote _ under _ Merged Events Logs will look like this:

CustomerItemAmountChange	System Internal	PriceChange	2021-07-20 23:01:23	Amount : 119820.19 => 141670.19 Vat : 0.00 => 0.00 SubAmounts : 119820.19 0 0 => 141670.19 0 0 MarkupAmount : -3739.81 0 0 => -3739.8
CustomerItemAmountChange	System Internal	PriceChange	2021-07-20 23:01:23	Amount : 141670.19 => 138860.99 Vat : 0.00 => 0.00 SubAmounts : 141670.19 0 0 => 138860.99 0 0 MarkupAmount : -3739.81 0 0 => -6549.0
OrderNote	VOID VOID	PriceChange	2021-07-20 23:01:24	PriceChange Price change shown to user; Old price: 117010.0, New Price: 138860.0

Useful information:

1. Clicking on "Back to payment", will remove this message and update the payment page with the new payable amount, without submitting the page. This means, that if the customer clicks on "Accept new price", the booking will be processed, if they click on "Back to payment" the payment page will be updated and the customer can either quit or process the payment/booking.
2. The message is not a pop-up that could be blocked by browser settings.

3. Is there any reason the message would not appear?

The answer here is that anything that can go wrong in loading the page e.g. user's internet is down etc, would prevent the message from loading. But in those cases, we won't proceed to actually make a booking as the customer wouldn't accept the price change.

4. There is currently no way to determine whether the customer clicked on "Accept new price" or "Back to payment", but we can just review whether they continued because we would get an order afterward.

Important to note is that orders coming through Booking.com are not affected by this development. This means that these orders will have neither an errand nor a log showing the price change, however, according to Booking.com this topic is covered internally, and the change is always shown to the customers.

How to check Fare hike, if there is no errand note in the order (as mentioned above):

If the customer contacts us claiming there was no information about a fare hike or a fare hike they did not confirm, or chose *"Back to payment"* and still got a booking, and there is no errand note in the order, please do as follows:

- 1. Always check what the passenger paid (Air):

Summary

#	Product	Reference	Amount	VAT	Markup	Provider amount
1	Air / Amadeus, Sabre	 	742.50 BRL	-7.43	-37.17	2JSLM8
2	Credit Card		29.63 BRL			
3	Total amount		772.13 BRL			

Provider amount

779.67

Markup

-37.17

Non bank addition

0.00

Total

742.50

Start site price: what the passenger saw during the booking.

End site price: what the passenger was charged eventually.

-
- Check if the “start site price” and “end site price” are the same.
 - If yes, then there is no fare hike.
 - If not, then there is a fare hike: inform the customer we will investigate and get back.
- Check if the “End site price” is the same as “Air”.
 - If yes, then escalate to the manager.
 - If not, then escalate to SS.

How to escalate:

For Outsourcing companies: Open a ticket through the Service Desk.

For the In-house team: Insert relevant notes and open Jira to the “Retail Loss (RL)” project as a tech error.

- Once your manager approves the cost, raise a contact form to SL payouts through Etrack by selecting the category "Additional Payout".
- Register errand: *Category 6: Payment questions Type: 9: Fare hike*
