

For some markets, it is common to we see that the customer’s name has been shortened due to the restriction each GDS has on how many characters are allowed in the name field. For some airlines, the name shortening is accepted, but for others, it is not and we need to proceed with a name correction taking the cost on us as long as the customer has registered the names correctly.

To begin with, you can recognize a booking for which we have shortened the name as per the format below in GDS, while in Edvin it will fully appear:

```
PDR * READ MODE *  
  
STOSG38AA/1077KD/GS                10OCT22/1046Z  
  
RPP/RLC-xxxxxx  
  
--- TST RLR SFP ---  
  
RP/SINSG38SR/SINSG38SR      AS/RM 24MAR22/1408Z  xxxxxx  
  
ATHGR28CS/9997WS/22FEB22  
  
RF HDQRMAS 241408  
  
1.SMITH/LARA MS(ADT)  
  
2.CROFT T/LEONARDO MR(ADT)(INFCROFTSMITH/BELLA/05OCT20)  
  
3 AS 440 V 24MAR 4 LAXCUN      FLWN  
  
4 AP TICKET=ETICKET OWC MULTI
```

In the scenario where you will receive a passenger interaction (email, call, chat) and the passenger claims that there is an omission in the names registered, you first need to compare the GDS information with the information in Edvin, by checking in the Events and Logs tab in the category Order/CartEvents.

From the screen shown above, you need to click on the right side of the events, that happened at the time the reservation was created, in the line ‘Customer - Add Travelers’ to see how the customer had registered the names initially:

Session	Info	
tk17		130011;
tk17	NewTraveler: Male [REDACTED] DOB: [REDACTED] Cell: 1 4159008296. Email: [REDACTED] NewTraveler: Female [REDACTED] DOB: [REDACTED] Cell: . Email: NewTraveler: Female [REDACTED] DOB: 2020-10-05 Cell: . Email:	130011;
tk17	CustomerItem Id: 214098612829903 ProductType: Air...	130011;

Only if the name is different in the GDS from the original registration, can it be considered as our error.

ATTENTION: Always check for the last 'Customer - Add Travelers' event as due to fare hike, the customer might have made more than one tries to insert the passenger names.

Once you have made the required steps as per above, request the passenger to provide us with his passport and check the airline's policy to see what the possible charge, on us, will be.

For inhouse agents:

-
- If the policy has clear instructions and you can calculate the total cost of the charge, please open RL jira as 'Tech Error' for a person of authority to accept the charge on us. Support agent will take over the remaining actions and place the request on ticketing as we would do with a normal name correction.
- If the instructions are not clear and we need assistance from the airline to know the cost to us, please place it on support and the support agent will be responsible for opening the RL and the rest of the handling.
- In case the airline replies negatively to our request, please create a new PNR to see what the cost would be for issuing the new ticket. Once you make all the calculations, you may raise the RL jira using 'Tech Error' label.

For outsourcing agents:

- In the scenario that you see that we are indeed at fault, please send the request through 'Service Desk' to be handled. The agent assigned for this task will investigate further and finalize the order, based on the steps above.
