

We encourage you to provide your feedback about MOTO Payment feature via this [form](#). Thank you!

1) What products can be added using Secure IVR payment?

For all products and categories in add-on Cart, MOTO should be the preferred mode of payment **unless**:

a) the Customer declines the option

b) if it is not technically possible for us to accept a MOTO payment (LATAM market and Maestro transactions for Australian/ Canadian markets)

2) If the Customer is not able to fulfill the payment on the IVR, can we still give them the Payment link option as per our standard routines?

Yes, the payment link option should be offered as an 'exception', **if the Customer declines** or is unable to process the payment on the Secure IVR (example payment Links of situations could be: Customer does not have the credit card handy, a Credit card is expired). **Please note, that whenever you offer a Payment link, you shall state in your errand the reason why you could not use MOTO (i.e: pax denied MOTO, MOTO not enabled etc.).**

3) Can we use Secure IVR payment only for our ETG add-on products?

Update: refer to question# 1.

MOTO will be the preferred mode of payment for all products and charges (Airline and ETG)

4) Can we use Secure IVR payment if ETG add-on product is purchased together with Add on Sales/Our Service fee/ Airline cost and other

Update: refer to question# 1.

MOTO will be the preferred mode of payment for all products and charges (Airline and ETG)

5) If the call drops involuntarily during the Secure IVR payment secure flow, do we need to contact the Customer?

Yes, we will follow the standard routine for dropped calls which can be found [here](#).

6) How can the staff identify whether Secure IVR payment can be used?

When the Add-on cart is created, the MOTO Payment button gets activated on Edvin.

Secure IVR payment method will NOT be available for:

- LATAM markets,
- Orders from Gotogate.kr
- Customers from AU and CA markets, who wish to use a Maestro card.

ATT: Please note that the MOTO payment method is still in its initial launching period. Currently, MOTO Payment method is available for specific languages markets (for details refer to initial blogpost [here](#)). For orders where MOTO Payment is not available yet, the respective MOTO Payment button is automatically deactivated in Edvin's Add on cart.

7) After entering the card details, will the IVR reconfirm the amount that the Customer will be paying?

No. It is therefore mandatory for staff to **verbally inform** Customers about the amount and **the breakdown of the total cost (product & fees)** that will be charged to the Customer's card before transferring the call to the IVR.

ALSO, Customers need to be made aware of the full details of the added service/product (those details need to be added by the agents in 'Text to Customer' field in the Add on Cart. Also, ensure the flight details are always verified before transferring the Customer to the IVR

8) What are the time frame restrictions to insert the card details on the IVR?

*****Note: This information is only for the agent's awareness, and will **not** be communicated to the Customer*****
30 seconds for Credit Card Number, 10 seconds for expiry date, and 10 seconds for CVV/CVC number.

9) How many attempts does the Customer get on the IVR in one go?

Wrong details can be entered on the IVR a maximum of 3 times for each category (card number, expiration date, CVV). After which the Customer will be automatically redirected back to the agent.

10) What option must we select in Genesys in order to redirect the call to the IVR?

[Red Button] "Send customer to secure Payment IVR".

ATT: Before sending the customer to IVR flow, you must always ensure first that the MOTO Payment button is available in your Add on cart in Edwin.

11) How will the agent identify if the call is connected to the IVR?

A banner will appear on the top of the GENESYS window stating "Secure flow in progress".

12) How will the agent get the notification on Genesys once the IVR flow is finalized?

[Green Button] "Get token from Secure Payment IVR".

13) If the card details are incorrectly entered by the Customer, will the agent receive the token on Genesys?

No token would be generated in this case and you must ask the Customer to try again. Remember you must transfer the Customer to the IVR one more time.

14) If the card details were not inserted correctly by the Customer, what errors will the staff get on Genesys?

- Invalid card details (incorrectly inserted card number)
- Invalid expiration date (incorrectly inserted expiration date)
- Invalid CVV(incorrectly inserted CVV)

15) What option must staff provide after two unsuccessful attempts on the Secure IVR?

Staff must send the payment link as per standard routine.

16) Will there be only numbers in the payment token?

No, it will be a combination of letters and numbers.

17) If a valid token has been pasted in Edwin, what icon will you see confirming that the token is correct?
Green Tick.

18) What message will you see in Edwin if the payment was successful?
“Payment was successfully executed”.

19) Where can we find in Edwin, if the payment is successfully fulfilled?
1) Under Add a Purchase, it will be marked with (MOTO) in the Payment Type column
2) In the Payment transaction tab

20) Where can we find the services added with payments performed via Secure IVR in Edwin?
Under AddOn Sales in Order Summary

21) What is the list of possible errors (Payment failed and the Customer was not charged), which we may receive after entering the token and clicking on the pay button in Edwin?

The message shown to the agent	Description	Solution
DECLINED_BY_BANK	Transaction declined by customer's bank.	Advise the customer to check the card details or try a different payment method. The customer shall contact the bank for any further details.
GENERIC_ERROR	Temporary communication issues with the bank.	Payment may be retried again in a few minutes. If the error persists, the Customer shall contact their bank.
NOT_ENOUGH_FUNDS	Insufficient funds or exceeded transaction limit.	Advise the customer to check their daily transaction limit and try again or try a different payment method. The customer shall contact the bank for further details.
PAYMENT_DETAILS_ERROR	Invalid card details.	Advise the customer to check their payment card details and retry. If the error persists, try a different payment method. Customer shall contact their bank for further details.
TECHNICAL_ERROR	A technical error occurred.	Payment may be retried again in a few minutes. If the error persists, the Customer shall contact their bank.
USE_ANOTHER_CARD	The transaction has failed due to expired or blocked card, country restrictions or fraud, etc.	Advise the passenger to make sure your card is valid or supported as a payment method. If the error persists, try a different payment method. Customer shall contact their bank for further details.
MISSING_ERROR	Reused token or wrong token value	Check whether the token was copied correctly or used more than once.

22) Can we send an email to the Customer, if the payment is unsuccessful and the Customer is asking for a written confirmation that the payment did not go through?

Yes, we can send an email from Edvin using the email template "Secure IVR Payment attempt failed" (Under FL - Others folder). This needs to be sent only if the Customer is asking for it.

23) What needs to be done in case of an unsuccessful payment?

- Offer to retry try the payment again via Secure IVR, preferably by using a different card.
- If the Customer declines the Secure IVR payment, you may offer the Payment link option as per the standard routines

24) What to do in case of fare increase or the cost of the service/ancillary has changed

Check the cost difference, if the Customer agrees to cover the additional charge

- Follow the Secure IVR payment flow to collect the cost
- Do not suggest the payment link option in such cases, as it increases the risk of losing the availability again

25) What if the Customer declines to cover the additional charge and demands a refund of the initial payment?

Follow the standard routine for a refund of service using Modify order.

26) What if we are unable to confirm the change request due to technical issues?

Follow the standard routine for a refund of service using Modify order.

27) In an event where the request cannot be finalized due to name correction or any request for which we need to contact the Airline/SupPayment Link what must be done?

Collect the amount using Secure IVR payment and manually assign the file to the Support Queue from Edvin.

28) In which markets will Secure IVR not be available?

LATAM markets

29) What type of card payments are accepted on the IVR?

All card types are accepted on our site. **The only exception is Maestro cards for The Canadian and Australian markets.**

Agents must advise Customers from these markets that Maestro is not accepted and they should use any other card they may have before processing further steps.

30) What if it's a CC2C Booking, can we use Secure IVR payment to collect the refund fee?

Yes

31) When the call gets routed to the IVR will the staff on the other end be able to hear the Customer response or not?

No, Agent will not be a part of the IVR Flow.

32) How can I check if Secure IVR is activated for the market I am servicing?

You will see the MOTO payment button in the Add on Cart in Edwin.

Besides this, the launch dates by market will be shared as an Announcement on Shelf as and when available.

ATT: The fact that you are technically able to send the customer to IVR flow in Genesys, does not mean that MOTO Payment is enabled as a payment method for this specific order! Always check Edwin!

33) For how long is the token visible on Genesys, in case the agent needs to copy it again?

For as long as the call is open with the agent. It will close the script after the agent enters the wrap-up code and click on done

34) If an agent needs to send the Customer back to the IVR for collecting additional charges, will the page on Genesys get refreshed with a new token code after the transaction?

Yes, a new unique token code will be generated for the second transaction.

35) If the Customer has already had 2 unsuccessful attempts on the IVR and wishes to try with a different card, can we connect the call to the IVR again?

Agents should manually send the customer to the Secure IVR not more than twice (first attempt included). If the Customer gets a decline on the first attempt, always check if they can try with another card before transferring the second time. After a second unsuccessful attempt, always offer the payment link option.

36) What languages will the IVR messaging be available in?

IVR will go live for each market in their specific language. Go-live dates will be shared.

37) Can an agent update the amount in the Add-on cart after the token number is generated?

Yes, as long as the token is unused. The token number is an authorization by the Customer for us to use the card for the payment however it is not linked to any specific amount. If the Agent updates the Add-on cart with a new amount, he must ensure the new charges (along with break-up) and travel details are reconfirmed with the Customer before proceeding with using the token on Edwin.

38) If the call gets disconnected after flight details and charges are confirmed with the Customer but before the token is generated, should the outbound call be made through the respective queue to be able to offer MOTO?

As per current routine, the agent is obliged to call back the passenger anytime when the call drops. In order for the IVR flow option to be available, the agent will have to create a new outgoing interaction on behalf of queue. Otherwise IVR flow will not be accessible. Callback process has been updated with this information in relevant Shelf [page](#).

39) What details are visible on the payment confirmation receipt - will this have both the flight details and amount (**critical to have both to handle disputes from Customers**)

The payment confirmation receipt will have exactly the same form as it has now with PL. The amounts are visible as per Products added in the Add on cart, although the flight/ancillary details will be visible as per 'Text to Customer' field in Add on cart. A reminder - Agents must always ensure the right service 'details' are added in the Add-on cart and are also verbally confirmed to the Customer before MOTO is processed.

40) Since payment will be completed by the FL/SC agents would it be their responsibility to remove this from the Edvin Payment dash?

The MOTO Payment will not appear on the Payment Dashboard for further handling as PL does. Agent must only check for successful payment confirmation in Edvin and be responsible for follow-up actions.

40) Can MOTO be offered as a payment option for Chat?

The MOTO payments option will not be available for the Chat channel for now and agents must process a payment link

41) Can you void payment if incorrectly processed through MOTO

This is not currently possible.

42) Is it possible to transfer calls to MOTO IVR of a different language if the Customer requests?

This is not possible currently.

43) Shall MOTO Payment be used also when handling Schedule Change requests?

Yes, it is a preferred method whenever the request can be handled or followed up by the phone agent. For details please check relevant shelf guidelines under *Payment methods for post-sale services*.

44) Do we need to queue the file to the Support team manually, after collecting the amount using MOTO Payment for name correction/name change, or where an Airline contact is required?

Yes, we need to queue the file to the Support queue manually for them to handle the file

45) Can we use MOTO payment for a schedule change file where the passenger is asking for a second alternative and authorization is not required?

Yes, we will use MOTO payment.

46) For a schedule change case where we need authorization from the airline by email, can we use MOTO payment?

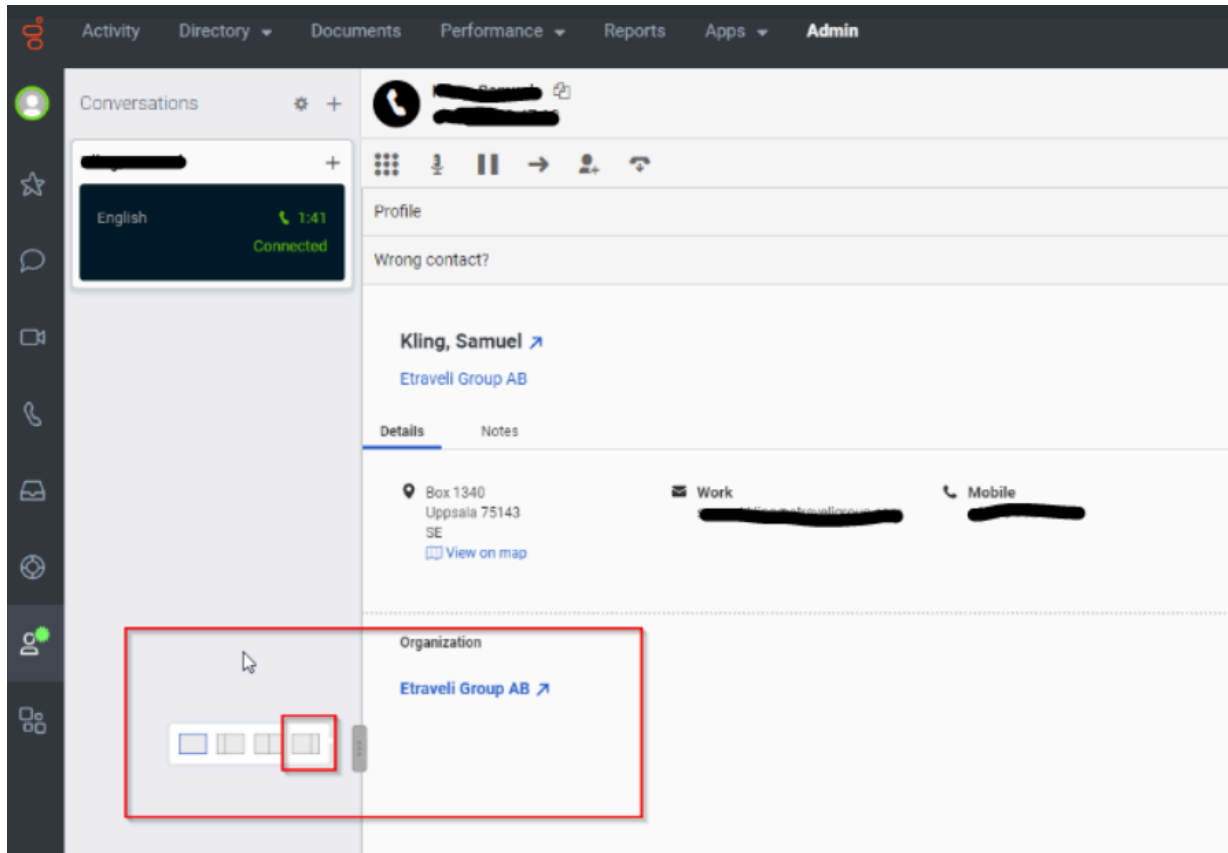

Yes, we will use MOTO payment and will queue the file to the respective queue manually for them to obtain authorization from the airline

47) If the passenger is asking for an alternate flight option due to schedule change and authorization is needed by phone from the Airline. In such cases can we use MOTO payment?

No, we will send a payment link to the Customer as per the normal routine.

48) What to do if the 'Send customer to secure Payment IVR' button is not visible in Genesys?

Make sure that the panel of your on-going interaction is not hidden. Click on buttons shown on the below image:

Remember that for outbound calls you always have to perform the interaction on behalf of a queue.

If the above points are met and you still face an issue with unavailable IVR flow, kindly use the feedback form to report the error received.

49) Can I forward the customer to IVR flow for any order where I see 'Send customer to secure Payment IVR' in Genesys interaction?

NO! 'Send customer to secure Payment IVR' button is enabled for all queues in Genesys, but it doesn't mean that MOTO is an available form of payment for all orders. Always check the Add on cart in Edvin to see if the MOTO Payment button is enabled. Otherwise you risk sending the customer to IVR flow for an order where you won't be able to charge him/her via MOTO!

50) Can I use MOTO Payment feature when my call is under active monitoring?

No, MOTO Payment feature is not technically available when the call is under active monitoring (Supervisor's monitoring or other agent's shadowing). In such cases, follow PL routine.

51) Can I offer MOTO payment on [Booking.com](#) order?

Yes, provided that MOTO is available on this particular market. MOTO payment is now enabled on [Booking.com](#) orders for the enabled markets. Remember that for orders where MOTO Payment is not available yet, the respective MOTO Payment button is automatically deactivated in Edwin's Add on cart.
